Smartphone health application market to more than treble by 2016

According to a report by ABI Research, the smartphone healthcare application market will grow to \$400 million in 2016 from \$120 million in 2010. The growth in the number of mobile handsets and their ability to easily connect to wearable devices will spur the growth.

"Downloadable apps are moving the sports tracking device market from proprietary devices to mobile phones, but adoption has been limited by the data they can collect. However, with the connectivity that Bluetooth Smart will embed in mobile handsets, wearable devices will bring greater detail to mobile handsets," says Jonathan Collins, principal analyst, ABI Research.

Worldwide semiconductor industry slows down

Semiconductor sales have dropped all across the world and are expected to drop further in the fourth quarter this year, according to market research firm Gartner. For the rest of the year, the inventory correction

Rajesh Chandiramani, head of India business for telecom solutions company Tech Mahindra, has put in his papers and joined the India unit of Capgemini as vice president of sales. His responsibilities in the new job include driving the right offshore mix for the IT and outsourcing company's global clients.

process in the industry is expected to continue to dampen sales prospects. There are chances that sequential growth will return to the industry in 2012. Slow economic recovery in the world led to the inventory buildup, states the report. Owing to this, there was low consumption of PCs and other electronic equipment.

Peter Middleton, principal research analyst, Gartner, said, "We expect that average selling prices for foundry-produced components will be under pressure through the first half of 2012 because of aggressive investment in capacity made as the industry came out of the last recession."

Gartner states that corrective action will help in bringing it back under

control at the cost of reduced sales for semiconductor vendors.

LTE to drive evolved packet core spending

According to a study by ABI Research, mobile operator spending for wireless core gateways will exceed \$1 billion this year. The growing deployment of LTE networks is the main driver for increased spending on gateways, which, in turn, are driving evolved packet core (EPC) spending. Wireless core gateway spending is expected to be \$1.1 billion in 2012, of which LTE EPC spending will be \$588 million.

Jim Eller, principal analyst, wireless infrastructure, said, "Although
