

and use this virtual money to purchase goods and services at retail outlets. Retailers and *kirana* stores across the country will act as a loading point for Money on Mobile (MoM) electronic prepaid payment instrument," said Shashank M. Joshi, managing director, MMPL.

MoM service operates independent of the consumer's mobile operator or bank, and hence any mobile subscriber can avail it.

IBM India goes solar to power data centre

IBM has rolled out its first solar-power array designed specifically to run high-voltage data centres, integrating AC- and DC-based servers, water-cooled computing systems and related electronics.

The solar array is spread over more than 550 square metres (6000 square feet) of rooftop covering IBM's India Software Lab in Bengaluru. It is capable of providing 50 kilowatts of electricity for up to 330 days a year, for an average of five hours a day.

By employing unique high-voltage DC power conditioning methods and reducing AC-DC conversion losses, the IBM solution can cut energy consumption of data centres by about 10 per cent and tailor solar technology for wider use in industrial IT and electronics installations.

Mouser unveils medical applications product knowledge site

To keep design engineers informed about the latest products and new design possibilities in the medical arena, Mouser Electronics has launched the second in a series of medical application websites focusing on common medical therapies.

To view the site, visit http://www.mouser.com/medical_therapy/. The site includes block diagram navigation, part lists, resources, videos, and featured products for targeted therapies—hearing aids, infusion pumps,
