

MICROCONTROLLERS

Here are a few websites that are a good resource for anyone interested in microcontrollers. These are full of tutorials, FAQs, project ideas and more

Hobby Projects

Hobby Projects is a collection of links to thousands of electronics circuits, schematics, online tutorials, etc. New circuits, tutorials or links to useful circuits are added regularly as a resource for school and college students, beginners, hobbyists, engineers, inventors and consultants.

The website has a dedicated tutorial section for different microcontrollers, which has been further divided into basic and advanced tutorial sections. The website also offers resource to electronic component manufacturers and datasheets.

8052.com

This website, online since August 1997, is dedicated to the 8052 microcontroller, related products (both hardware and software) and 8052 derivative chips. This includes the traditional 8052, 8051, 8032 and 8031 along with derivatives by Atmel, NXP and many others.

The website includes tutorials, FAQs, projects and a code library. Majority of the material on the website is written by the webmaster Craig Steiner who is a founding member of Vault Information Services.

Rickey's World

The website is a good resource for anyone interested in microcontrollers. It was started around four years ago by Ajay Bhargav. Apart from many microcontroller-based project ideas, the site has tutorials for PIC and AVR microcontrollers. It also has a Chatbox, which can be used by the members to chat and share thoughts and problems related to microcontrollers.

Renesas

Renesas Electronics Corporation is a leading supplier of microcontrollers, system large-scale integration devices, plus analogue and power devices. The website is a resource for all products of Renesas Electronics. It also has a section dedicated to e-learning under its FAQs/Support link. The section includes entry-level tutorials as well as tutorials for engineers to understand the operation of their microcontrollers.

Arduino Tutorial

Most of the stuff on this site is related to electronic toys, gadgets and what the website's author has worked on since 2003. The site has no advertisements, and nearly all of its content is Open Source under the Creative Commons Licence. The tutorial on the site is divided into six lessons that teach you from configuring your board to using it.
