

The cost effective solution

PG-6DI Professional Grade Electrolytics

Wide range of 50 VDC to 500 VDC

- Higher ripple rating and low ESR can reduce the "total capacitance" and the size of the capacitor bank. This will bring down the cost.
- Wide capacitance range in each voltage helps cut costs by reducing the size and footprint of cabinet and optimising the area of the bus bars.
- Capacitors with rating like 10,000 MFD and 15,000 MFD available in 315, 350 and 450 VDC.
- Also available capacitors of 200 and 250 VDC for ratings up to 33,000 MFD

Highlights

- Capacitors rated for 500 VDC with capacitance values of 1500 MFD to 10,000 MFD.
- Custom designed capacitors with operating temperature rating -40°C to +85°C, -40°C to +105°C
- Custom designed long life grade capacitors
- ROHS compliant
