RF & Wireless

Microchip's display solutions offer the ability to quickly integrate graphics display functions into existing applications in a single microcontroller – reducing development risk, total system cost and time to market.

The PIC24FJ256DA microcontroller family integrates three graphics acceleration units and a display controller, along with 96 Kbytes of RAM. This integration reduces system costs by eliminating the need for external RAM and a display controller. Additional savings are achieved through the integrated peripherals for USB and capacitive touch sensing.

Microchip's simple and easy to use graphics display solutions offer:

- A broad portfolio of 8-, 16- and 32-bit PIC® microcontrollers for segmented and graphics display applications
- Free licensed Microchip graphics library (including source code) with touch screen support
- Low cost and full-featured development tools with integrated graphics display
- Third party graphics support

GET STARTED IN 3 EASY STEPS

1. Purchase a PIC24FJ256DA210 Development Board
2. Download the Free Graphics Display Designer software and libraries
3. Order samples and start designing!
