CREATE OEM LOGO USING VISUAL BASIC.NET

■ SOMARAJ N.

When developing a device driver or application software, the need arises to create your own logo. It's then you wonder how computer manufacturers put their own company name and OEM logo onto the system properties window. Here is a program to add your

own logo and support information in 'System Properties' screen of your Microsoft Windows operating system. The program is developed using Visual Basic.NET 2005 on Windows 2000, XP or 2003 operating system.

Before going into the source code, let us explain what OEM and OEM Logo mean. OEM stands for 'original equipment manufacturer.' It is a com-

pany that builds products or components which are used in products sold by another company. For example, when you buy a branded PC, you can see the manufacturer's logo (OEM's logo) and support information in 'System Properties' window (refer Fig. 1). You can see 'System Properties' window by right-clicking 'My Computer' icon and then selecting 'Properties'
