USB 3.0 flash drive

Transcend Information has added the JetFlash 700 USB flash drive to its USB 3.0 product portfolio. The JetFlash 700 has a sturdy, smooth exterior and offers fast data transfer rates, making it a

perfect entry-level USB 3.0 peripheral for users who demand stylish aesthetics with leading technology.

The JetFlash 700 delivers data transfer rates of up to 70 MB/s—nearly twice the read speeds—and provides much quicker and easier access to rich digital content. Users can download the useful JetFlash Elite data management tools to check their e-mail from any compatible computer and use the JetFlash drive as a key to automatically log on to website accounts.

The JetFlash 700 is priced at Rs 1300 for 8GB model, Rs 2000 for 16GB model and Rs 5600 for 32GB model.

COMMUNICATION

Telephone loggers

Copper Connections has launched USB- and PCI-card-type telephone loggers for single- to 16-line recording. These loggers can record telephone conversations, caller ID (CLI)/phone

numbers, date and time of calls, etc.

The loggers can be connected in parallel to the telephone lines or PBX extensions. You can listen to the calls

remotely in the LAN environment or through the Internet. While storing on the hard disk of the PC, the calls are compressed so that 175 hours of recording consumes only 1 GB of space. You can set filters so that calls from selected telephone numbers are not recorded.

SECURITY

Analogue cameras

In a market crowded by 420, 480 and 520 TVL (TV line) cameras for closed-circuit TVs, AV Systems has introduced the 600 TVL range of analogue cameras in India. These cameras are said to offer high-resolution picture quality at competitive price compared to conventional 480 TVL analogue cameras. At present, the range consists of a 600TVL dome camera and a 600TVL IR LED camera for night vision.

LIGHTING

PowerLED-based industrial well-glass luminaire

BINAY has introduced PowerLED replacements for conventional well-glass

fittings. These PowerLED units are of similar physical shape to conventional well-glass fittings, but fitted with long-life (100,000-hour), high-quality IES-NA-80 approved LEDs from Osram

or Cree, thus saving on maintenance costs while providing the benefits of low power consumption. The designed life is 15 to 20 years, with a warranty of five years.

Both low- and high-voltage variations in industrial environments result in drastic reduction in the life and light output of conventional lamps. There is no such problem in the case of BINAY LED well-glass fittings.

TEST & MEASUREMENT

Vector network analysers

Agilent Technologies Inc. has introduced two options for its ENA Series E5061B 5Hz-to-3GHz vector network analyser. The new RF NA (network analysis) and ZA (impedance analysis) options increase the analyser's frequency range, speed, upgradability and versatility. This enables the analyser to deliver high performance for basic RF network and impedance
