

BINAY – Lighting Up The Future

Binay LED Aviation Obstruction Lights

**BINAY LED-based MEDIUM INTENSITY
Aviation Obstruction Light Beacon**

*As per the International Civil Aviation Organisation (ICAO) requirements
for use on structures above 45m*

*Available in Low Intensity and Medium Intensity versions (as per
the International Civil Aviation Organization guidelines), BINAY's
patented LED Aviation Lights come with a 5-year warranty*

LED Obstruction Lighting for:

- Industrial chimneys and smokestacks
- Transmission, microwave, and cellular towers
- Radio, TV and similar structural towers
- High-rise buildings and structures
- Airports and airfields

The BINAY LED Aviation Obstruction Light offers the following advantages:

- Fit-and-forget maintenance-free operation
- A long life of 100,000 hours (20 years at 12 hours daily burning)
- Pays for itself within a short period of operation in the form of reduced installation, maintenance and servicing costs
- Quick installation; Reliable operation 365 days per year
- Shock-proof and vibration-resistant
- Over-Designed Intensity to allow for natural LED intensity degradation over its operating lifetime

**THE BINAY LED OBSTRUCTION LIGHT IS UNDER ACCEPTED
PATENT, AND AS SUCH IS A PROPRIETARY PRODUCT**

the basic component of Microsoft's Kinect sensor for Xbox 360 gaming console, are working on a project to bring motion sensing to PCs so as to let users use their gestures to surf the Web, check social networks and control videos on their PC or TV connected to the PC.

Kinect uses a 3D camera, depth sensors and voice-recognition software to recognise your face, voice and gestures as you move around and talk, without requiring you to hold a controller or wear a headset. As a result, you can control on-screen characters in video games simply by talking or moving your body.

Asustek and PrimeSense plan to enable motion control on PCs by the second quarter of 2011. To make it a success, they will use an accessory called the WAVI Xtion, which blends an Asus user interface with PrimeSense' 3D technology.

World's first multi-touch mouse

Apple has come out with an advanced point-and-click mouse that lets you click and double-click anywhere on its multitouch surface. While Magic Mouse comes standard with every new iMac, you can also add it to any Mac with Bluetooth wireless technology for a multi-touch makeover.

The multi-touch area covers the top surface of Magic Mouse, and the mouse itself is the button. Scroll in any

Apple's multi-touch mouse

direction with one finger, swipe through webpages and photos with two, and click and double-click anywhere. Inside Magic Mouse is a chip that tells it exactly what you want to do. This means Magic Mouse won't confuse a scroll with a swipe. It even knows when you're just resting your hand on it.

Magic Mouse uses powerful laser tracking that's far more sensitive and responsive on more surfaces than traditional optical tracking. That means it tracks with precision on nearly every surface—whether it's a table at your favourite cafe or the desk in your home office—without the need for a mousepad.

Now print in 3D

Kodak, the company which brought photography to the masses, has launched a printer that can print images from your digital camera in 3D.

The printer, called ESP C130, was unveiled at 2011 International Consumer Electronics Show held recently in Las Vegas. It uses two paper-frame 3D glasses, along with special 3D-processing software and instructions. Users will have to
