

Kodak ESP C130 printer

shoot the same scene twice but from slightly different angles. The software will then combine the two images and print it as one single picture in 3D. The 3D effect is created using the anaglyph process.

Multilink Bluetooth keyboard

USA-based IOGEAR has created a multilink Bluetooth keyboard that can wirelessly switch between six Bluetooth-enabled devices. Bluetooth 2.0 technology in the GKM611B provides a 9-metre radius of operability, allowing the keyboard to go from couch to kitchen table or conference room to office, switching between different devices with ease.

Once the user switches to the desired Bluetooth-enabled device, custom hotkeys provide greater convenience with pushbutton access and management of My TV, videos, pictures, music, Internet browser, volume control and more. An Integrated touch pad with left and right mouse buttons adds additional flexibility, as users are not required to keep a separate mouse in tow when switching between devices.

New materials and transistor structures

US computer giant IBM and South Korean electronics titan Samsung will jointly develop a new semiconductor process technology that can be used in a broad range of applications—from smartphones to communications infrastructure.

Researchers from the two companies will also invest
