less prone to damage from rough use. Choose the one that suits your capacity need and use.

Standard memory sizes for smaller players include 1 GB, 2 GB, 4GB, 8 GB and even 16 GB. Besides, many players support add-on memory cards for expandability at a later date.

Small players usually have flash memory—which is particularly good for the athletic types or fitness enthusiasts who would use it while jogging or for timing their aerobics exercises. A very lightweight and water-resistant player with good build (one that does not damage easily with the small impacts of physical exercise) is recommended. In fact, flash-based players are becoming the norm even for regular users as their prices fall and larger capacities become available.

Battery life

The battery life of a portable media player is critical as you may want to
