- Additional Features: Retina display, A4 chip, FaceTime video calling, HD video recording, game centre, accelerometer, three-axis gyro, ambient light sensor

ones are WMV, SMV, MP4 and 3GP.

Don't get bogged down by how many formats the chosen player will support. Most of the time you are likely to have audio or video files in just two or three common formats. So check support for the formats that you would be playing most of the time.

User interface and navigation

With large libraries of music and videos, it is often a tedious task to search and locate the right content for the mood of the moment. A good user interface, quick scroll-through menus and support for playlists come in handy.

Players with touch-screen interface are becoming popular—typically, these make the user interface much simpler and intuitive. The tactile four-way click control on many players is something you can get used to very easily.

Look for ease of playback and navigation, keeping in mind that different players use different software for these interfaces. You would not want to be

play music for a long time without recharging. Typically, the battery life is around eight hours to 20 hours. Many players offer quick-recharge function through which you can charge the player in less than five minutes.

However, the battery life depends a lot on your personal usage. The greater the number of applications used on a media player, the more the energy consumed by it. Large screen size and high brightness too lower the battery life.

A few players stand out in the market purely for their ability to offer extremely long playing hours on a single charge. For instance, Zebronics' Zebmate 20 and Zebmate 75 claim battery life of up to 20 hours and 75 hours, respectively.

File format support

The most commonly supported audio file formats are MP3, WMA, AAC and MPEG-4. In video format, the common

Creative Zen X-Fi Style

Features

- Storage: 8GB/16 GB (internal)
