

PRI connectivity to an IP-PBX user. It is scalable up to 32 IP channels, with various call control features and superior voice quality.

Some of the key features include dynamic DNS, fax over IP, multiple SIP accounts, network clock synchronisation, peer-to-peer calling, programmable TE and NT modes, remote management and Web-based programming.

TEST & MEASUREMENT

PXI Express chassis

National Instruments has announced two new PXI Express chassis that deliver added value and performance to automated test and control applications at the same price as similar PXI chassis. Engineers can use the NI PXIe-1078 nine-slot and NI PXIe-1071 four-slot chassis to take advantage of the latest PXI Express modules and controllers with the flexibility of backward compatibility with existing PXI modules.

The NI PXIe-1078 nine-slot chassis features 1GB/s total system bandwidth. It accepts up to a four-slot wide embedded controller in one slot and supports up to eight peripheral PXI Express slots with five slots compatible with both PXI Express and PXI modules.

The NI PXIe-1071 four-slot chassis offers 3GB/s total system bandwidth. It accepts up to a four-slot wide con-

troller in one slot, with three slots available for either PXI Express or PXI modules. This chassis offers more than 20 times the bandwidth of the same-priced NI PXI-1031 standard four-slot PXI chassis.

PCIe 3.0 test solution

Tektronix has announced a comprehensive test solution for PCI Express 3.0 that provides physical-layer transmitter verification, debug, characterisation and compliance testing using Tektronix DPO/DSA/MSO70000 Series oscilloscopes.

The Tektronix PCIe 3.0 solution (Option PCE3) builds on the success of PCIe Gen 1 and Gen 2 test solutions. Coupled with Serial Data Link Analysis (SDLA) software, it provides a complete solution for verifying transmitter and channel performance of PCIe 3.0 designs and provides support for both the PCIe 3 Base and CEM specification measurements.

Cable and antenna analysers

The ZVH handheld cable and antenna analyser from Rohde & Schwarz is designed for installation and maintenance of antenna systems in the field. Two different models (ZVH4 and ZVH8) are available, which cover a frequency range from 100 kHz to 3.6 GHz (ZVH4)/8 GHz (ZVH8).

The base unit offers reflection measurement, distance-to-fault measurement and single-port cable loss measurement functions as standard.

Spring fatigue and load-deflection testing machine

AG Measurermatics has introduced a series of fatigue and load-deflection testing machines that allow the users to subject a spring to load-deflection testing before and after a predefined displacement-controlled fatigue testing for a large number of cycles.

These machines have the facility of both computerised load-deflection testing and motorised cam-operated fatigue testing with sinusoidal fatigue stroke. Springs of up to 400mm diam-

eter and up to 500mm height can be subjected to fatigue stroke of up to 120mm peak-to-peak at 150 strokes per minute. The spring under test can also be subjected to computer-controlled load-deflection test up to the rated load capacity to determine its free height, load at

static height and height at static load, before as well as after every predefined fatigue cycle and, finally, also after completion of the fatigue test.
