

PC sales in India to grow 25 per cent

PC sales in India will total 13.2 million units in 2011—a 24.7 per cent increase from 2010. According to Gartner, PC demand is growing beyond India's largest cities. Vendors are seeing an increasing demand from smaller cities in India where PC penetration has grown considerably. Rising income and declining PC prices are significantly contributing to this growth. Gartner estimates that roughly 35 per cent of PC vendor revenue today comes from Tier III and IV cities. This will grow to 50 per cent by the end of 2013.

"There is an increased aspiration to own a PC in India. The younger generation is contributing to the large-scale adoption of PCs in India in a significant way," said Vishal Tripathi, principal research analyst at Gartner. "Besides reading and surfing the internet, the usage of PCs for watching movies, listening to music and gaming are playing a pivotal role in driving demand."

Rs 600-billion broadband plan to reach villages

To boost broadband penetration across India, especially rural areas, the Telecom Regulatory Authority of India (TRAI) has mooted a Rs 600-billion plan to roll out optical fibre cable network. TRAI also says that consumers should get a minimum download speed of 512 kbps (against the current 256 kbps) from January. This will be subsequently upgraded to 2 Mbps by 2015.

Approximately 2.54 million km of fresh fibre will have to be laid down to meet the new bandwidth requirements. The new network, to be rolled out in phases by 2013, will connect all habitation with population of 500 and above.
