

New Delhi gets second solar power plant

Sheila Dikshit, chief minister of New Delhi, recently inaugurated a 1MW solar power plant in Keshavpuram of North Delhi. The plant, built by Tata BP Solar, has more than 5500 solar photovoltaic panels made of crystalline silicon, which will absorb sunlight and convert it into electricity. The electricity generated will be fed into the main grid line of North Delhi Power Limited.

Hinduja Group to manufacture solar products

Gopichand P. Hinduja, co-chairman, Hinduja Group of Companies, recently signed a memorandum of understanding with a French solar company to develop and manufacture solar products in India. However, the details of this project are yet to be finalised and may take another three to four months to get this deal working. Besides solar, Hinduja Group is also looking at the proposed revision of the semiconductor policy, due under the Ministry of IT and Communications, to further decide on its future course of action.

Lanco Infratech's 100MW solar thermal project in Rajasthan

Lanco Infratech, which recently completed its first 5MW project at Patan (Gujarat), is now all set to develop a 5MW solar photovoltaic (PV) project and a 100MW solar thermal project in Rajasthan under the first phase of the National Solar Mission. "We are very excited with the recent developments in the sector in India and the way our project pipeline is taking shape in solar," quipped Sai Baba, CEO, Lanco Solar.

Scientech and Agilent to work together in education

Scientech Technologies will now actively promote and sell Agilent Technologies Electronic Measurement Group products for education in India. The company, with its strong presence in education for over 25 years, claims to be fully equipped to provide the sales and support of a much wider range of products from Agilent to its customers.

Bengaluru gets TI's Kilby Labs

Texas Instruments (TI) has announced the first international expansion of Kilby Labs at TI India in Bengaluru. Kilby Labs, named in honour of Jack Kilby, inventor of the integrated circuit (IC) in 1958, is the newest addition to TI's R&D model. Since its opening in Dallas in January 2009, Kilby Labs has completed five projects and launched one new business unit from the work realised in the lab. Kilby Labs India will be led by Dr Venu Gopinathan, who joined TI in June 2010.

service will not only help Tata Teleservices increase its subscriber base but also help the Japanese manufacturer boost its handset exports.

Once commercial service begins, DoCoMo will charge commissions to local TV broadcasters and Japanese content providers for use of the technology. Tata Teleservices is also working on raising funds to establish base stations for its 3G mobile phone service.

HP to scale up operations

HP Enterprise Services has designated India as one of six best shore global delivery hubs to support rising client demand for lower-cost, scalable services. The Best Shore expansion plan for India under the existing en-

vironment and other related factors includes launch of three new facilities in Bengaluru and Chennai.

HP Best Shore hubs are designed to improve the client experience by offering access to deep industry and technical expertise that can tailor sophisticated solutions to meet unique client requirements. Additionally, the hubs will help reduce delivery complexity by providing multiple services from a single location.

First CMAI Mobile Expo held in India

The CMAI International Mobile Sourcing and Investment Expo 2010 was recently inaugurated in Delhi by Union Minister of State for Home Affairs Ajay

Maken. Maken invited foreign manufacturers to start the manufacturing in India.

At the expo, several manufacturers from Taiwan, Korea and Japan showcased their latest technologies and products. The products included Android phones, video transfer capable phones, notebooks, iPads and low-cost phones with all facilities. Business contracts worth about \$50 million are estimated to have been signed.

A group of five companies announced their plans to start mobile phone manufacturing in India within the next one year. They identified West Bengal as the probable location for establishing the manufacturing plant.

LG to strengthen its electronics business

In order to beef up its key electronics businesses, LG Group plans to increase its spending by 12 per cent to a record \$18 billion in 2011. The company plans to invest 16.3 trillion won (\$14 billion) in capital expenditure and 4.7 trillion won in R&D, to accelerate the development of new growth engines.

"The focus for 2011 will be bolstering our core businesses of smartphones, tablets, TVs and large-sized displays and also supporting new growth engines such as solar cells, new types of displays and small-sized display panels for smartphones and tablets," the group said in a statement.

Toshiba's new plant to make iPhone LCDs

Toshiba is mulling over establishing a new plant in the Ishikawa prefecture, Japan. It will invest about 100 billion yen (\$1.2 billion) to build the factory for making high-resolution, low-temperature polysilicon LCD panels, primarily for Apple. Toshiba Mobile Display Co., the company's wholly owned unit, will start building the facility early this year with production expected to begin in the second half. Apple will also invest in a portion of the factory.
