

QST4416-FC

Linear & Mixed Signal Test System

First
of its kind in
India

QST4416-FC a low cost Linear and Mixed Signal Parametric Tester is another creative product from Qmax. This semiconductor ATE's superiority is in linear, power management and low cost digital and mixed signal IC testing.

Features

- Ideal for QC/Inspection and production Industry.
- Broad analog and digital Instrument suite
- Digital test rates up to 50MHz
- High performance and fastest SMU unit up to 5A/50V
- Simple and intuitive programming software with full GUI support
- Rich Datalog, Yield Alarm Management and Device characterization tools
- Powerful engineering and debug software tools leveraging industry standards
- Authenticated multi-access levels for test program and revision control
- The smallest foot-print in the industry
- Highly scalable design and Seamless extension of test resources
- True multi-site testing, up to unmatched 8 simultaneous sites

Seagate Barracuda Green hard drive

industry's highest spin speed (5900 rpm) with Seagate's SmartAlign technology to deliver best-in-class performance. SmartAlign technology enables all the benefits of the new 4k sector standard while simplifying drive installation by eliminating the need for utilities often required to ensure optimal drive performance. The cool-running, lower-power Barracuda Green hard drive delivers whisper-quiet acoustics and helps reduce system costs associated with the fans and power supply devices often required for power-hungry systems.

Seventy per cent or more of the materials used to build the drive can be recycled. Minimal use of halogen components reduces the negative environmental impacts related to these substances.

The drive is offered in capacities of 2 TB, 1.5 TB and 1 TB.

Speech recognition based authentication

A team of Indian professors is working on a person authentication system based on the speech verification method. The system, retrofitted into any password authentication system, will recognise your voice as a password—irrespective of the language you speak. And when launched, it is likely to work in all environments—offices, railway stations, airports or ATMs.

"The real challenges are to make the system Indian-language compatible and failproof. Plus, it will have to support different accents of Hindi as well as Indian English. It will also have to work perfectly well in noisy environments," said Dr S.R. Mahadeva Prasanna from Indian Institute of Technology-Guwahati (IIT-G).

"We are now busy ensuring that the system can handle voice deviations and yet be failproof," added Dr Rohit Sinha, who is working with the professor on the project and is an assistant professor at IIT-Guwahati.
