

Televisions Are **3D-Ready**, But Are We?

All the major brands have launched 3D-ready televisions based on stereoscopic techniques that require viewers to wear special glasses. Auto-stereoscopic glassless models are also in the making. In short, the technology is evolving rapidly, but what about the content? The lack of substantial content, more than the high cost of televisions, is the real dampener in the way of 3D televisions

■ JANANI GOPALAKRISHNAN VIKRAM

Those who watched India's first three-dimensional (3D) movie *My Dear Kuttichathan* (*Chhota Chetan*) in the theatre might still recollect a couple

of nauseous viewers rushing to the washrooms! Well, it was a wonderful movie, which amassed over ₹ 500 million at the box office—a mighty achievement in the eighties. Nevertheless, the red-and-blue anaglyph 3D glasses that the viewers were required

to wear as well as the somewhat jolty 3D effect had an uncomfortable effect on some viewers.

The crude glasses were perhaps the least of the overheads. Studios had to use special colour filters while recording movies. Equipment were
