

Key EMS Players in India

A healthy competition is brewing amongst EMS players who are trying to woo customers through various innovative services. Take a look at key EMS players in India and services provided by them

■ UMA BANSAL

Thanks to India's middle class driving the domestic demand for electronic products, we are fast emerging as a major electronics manufacturing services (EMS) provider. A report by ELCINA Electronic Industries Association of India says this market is likely to expand quickly to \$150 billion by 2015 at a CAGR of 22-23 per cent.

EMS growth is driven by such factors as rapid growth in telecom, consumer, medical, strategic and automotive electronics sectors, availability of talented English speaking workforce for design and engineering services, rising labour costs in developed countries, and improvement in India's logistics, infrastructure and supply chain.

EMS companies are the ones which design, test, manufacture, distribute

and provide repair services for electronic components and assemblies for original equipment manufacturers (OEMs).

The EMS industry is driven by large economies of scale in manufacturing, raw materials procurement and pooling together of resources. EMS companies offer industrial design expertise and

create value-added services such as warranty and repairs. These use state-of-the-art facilities to offer turnkey solutions for product testing and mass production of various electronic products including consumer, industrial and medical electronics as well as instrumentation products.

Majority of OEMs now outsource their manufacturing operations ranging from concept, design, selection, manufacturing, testing, assembly and distribution of electronic products to EMS companies. Thus EMS also involves electronic contract manufacturing services. These services include large-scale production of electronic products on contract basis by EMS companies at low-cost locations.

Realising the market opportunities, already many of the top EMS companies have set up shops in India. Names include the likes of Foxconn, Flextronics, Elcoteq, Jabil Circuit and Sanmina SCI. Thus a healthy competition is brewing amongst EMS players who are trying to woo customers through various innovative services. Take a look at key EMS players in India and the services provided by them.

Centum Electronics

Centum Electronics provides customers with product design, development and manufacturing solutions for high-reliability applications. With significant customer experience, it addresses customers in the space, defence, aerospace, communications and automotive markets. Centum utilises a range of high-reliability manufacturing technologies including thick- and thin-film hybrids, wire bonding, chip-on-board, SMT and mixed-technology PCBA. Quality systems and processes include MIL-PRF-38534, MIL-STD-883E, MIL-PRF-55310, ISRO-PAX-300, ISO 9001-2000, TS-16949 and AS9100 (under certification process).
