

Screenshot 4: Virtual receipt after successful transaction

for bank statement, ATM card and cash collection. Below the keypad is a virtual ATM card with an arbitrary number for this program.

Operation

The program operates in two modes – fast cash and online banking (refer Screenshot 2).

Clicking on the virtual ATM card makes the card disappear from the screen and 'ATM Card Slot' button

gets activated. Clicking on this button greets the user and prompts to input the PIN—1234—using the keypad given there followed by clicking the 'Ent' key. Screenshot 3 shows the encrypted characters after entering the PIN. If invalid PIN is entered, the program resets everything. If the PIN is correct, program will take you to the next screen. There are two options on the next screen—'Fast_Cash' and 'Online Banking.'

'Fast_Cash' has four options to select the amount—1000, 2000, 5000 and 10,000. When any one of the amounts is selected, the 'Collect_Cash' slot displays the number of notes dispensed based on Indian denominations. Within a few seconds, a virtual receipt of the transaction appears on the screen as seen in Screenshot 4.

When the transaction completes, the virtual ATM card appears on the screen for next transaction.

If any of the control keys, namely, 'Cncl,' 'Ent,' or 'Ext' keys are pressed without following the above mentioned procedure, the program resets itself. That is, once a transaction completes, never press 'Ent' key as it resets the program.

This simulator is programmed to dispense Rs 18,000 virtual cash. You can follow the same steps as explained above to withdraw cash till the cash balance is zero. Once it has zero balance, the screen displays "Transaction Failed, No Balance in your Account." You can exit the program and re-run it to replenish the amount.

Clicking on the 'Online_Banking' option takes you to efymag.com website. However, you can change the URL of your preferred website in the code at 'value=Online_Banking onclick="location.replace('http://www.efymag.com/')'.
