

COMPONENTS

Buck switching regulator

Microchip Technology has launched a 30V-input, buck switching regulator with 600mA output capability.

The MCP16301 features an input voltage range from 4V to 30V and output voltage range from 2V to 15V. It comes in a six-pin SOT-23 package with an integrated high-side switch. It is supported by the MCP16301 300 mA D2PAK footprint demo board and the MCP16301 600 mA demo board.

Microcontrollers

Renesas Electronics has introduced the RL78/I1A family including five 16-bit microcontrollers which implement LED

control, power supply control, and communication functions required in LED lighting fixtures in a single chip.

The microcontrollers adopt the company's RL78 CPU with 32 to 64KB Flash memory in 20- to 38-pin package versions.

LED driver

National Semiconductor has launched an integrated LED driver—LM3466. It integrates a 70V, 1.5A N-channel MOSFET and an input range of 6V to 70V.

The LED driver includes a fault status output, input under voltage-lockout, current limit and thermal shutdown protection. Each LM3466 conducts a current up to 1.5A. Communication between the LM3466 and constant current power supply is not required, nor is LED voltage binning. National Semiconductor India Designs Pvt Ltd,

Alternator ICs

Freescall Semiconductor has launched a single-chip alternator regulator integrated circuit (IC) that integrates local interconnect network (LIN) to provide increased control for automotive alternators.

The TC80310 has a single-wire LIN connection to the vehicle's engine control unit (ECU). The IC also features default regulation voltage from 10.6V up to 16V that is set during final test, integrated high-side excitation driver, internal free-wheeling diode.

Welding thyristor modules

SanRex Power Unlimited has introduced PWB and PWA series of three-phase non-isolated welding thyristor modules (half-bridge).

The modules for short-circuit current protection CR absorber, mounting and safe operating area, have joint anode terminals as mounting base. These are available in 60A, 80A, 100A, 130A and 200A current with blocking peak-inverse voltage up to 1600V.

iMEMS dual-axis accelerometer

Analog Devices has launched ADXL206 high-precision, low-power, dual-axis iMEMS accelerometer with signal-conditioned analogue voltage outputs.

The single-chip ADXL206 measures acceleration with a full-scale range of ± 5 gm and measures both dynamic and static acceleration. Bandwidths of 0.5 Hz to 2.5 kHz can be selected to suit the application. The ADXL206 is available in a 13x8x2mm³, eight-lead, side-brazed ceramic dual in-line package.
