

What's the reason for Sony to choose India and PI Industries for this futuristic research collaboration?

We are trying to make use of open innovation with various overseas laboratories in the field of materials and devices R&D. We will continue to bring new innovations with global wisdoms for prosperous lifestyle in the future.

PI Industries have more than 60 years of history in the fields of various custom-order synthesis, ranging from pesticides, to polymer-based precision components to pharmaceutical intermediates. It's a leading company in Indian chemical industry.

We had a chance to visit their R&D laboratory and learned that the lab was highly sophisticated and running under an excellent management team.

How do you see the future of advanced chemistry in India and the role Indian academia, Indian chemical companies and R&D centres can play?

India is highly respected in information technology and software development. And also in the chemical field, Indian companies including PI Industries and academia have advanced expertise. In addition, Indian market and industries will grow to become huge and energetic. Indian

chemical companies and R&D centres can play as one of the world leaders.

What are the future products, strategy and areas of research of Sony Corp.?

In today's business, we focus on 3D TV and related systems, entertainment contents download services and customised products for emerging markets.

For future business creation, in addition to organic and flexible electronics commented above, we will focus on new technologies in environment and energy area, and also healthcare and medical electronics area.

In environment and energy area, we are developing dye-sensitised solar cells, next-generation battery materials, home energy network solutions, recycled plastics, bio plastics, and so on. In healthcare and medical electronics area, we are developing biomolecule sensing and testing technologies utilising our consumer electronics technologies.

You have set up a joint research centre for synthetic organic chemicals. What are the intended electronics applications for these chemicals?

We are discussing and studying about these terms. We cannot comment on the exact applications at this moment. ●
