

BINAY- Lighting Up The Future

Binay LED Aviation Obstruction Lights

BINAY LED-based MEDIUM INTENSITY
Aviation Obstruction Light Beacon

As per the International Civil Aviation Organisation (ICAO) requirements
for use on structures above 45m

Available in Low Intensity and Medium Intensity versions (as per
the International Civil Aviation Organization guidelines). BINAY's
patented LED Aviation Lights come with a 5-year warranty

LED Obstruction Lighting for:

- Industrial chimneys and smokestacks
- Transmission, microwave, and cellular towers
- Radio, TV and similar structural towers
- High-rise buildings and structures
- Airports and airfields

The BINAY LED Aviation Obstruction Light offers the following advantages:

- Fit-and-forget maintenance-free operation
- A long life of 100,000 hours (20 years at 12 hours daily burning)
- Pays for itself within a short period of operation in the form of reduced installation, maintenance and servicing costs
- Quick installation; Reliable operation 365 days per year
- Shock-proof and vibration-resistant
- Over-Designed Intensity to allow for natural LED intensity degradation over its operating lifetime

THE BINAY LED OBSTRUCTION LIGHT IS UNDER ACCEPTED
PATENT, AND AS SUCH IS A PROPRIETARY PRODUCT

AGC has developed ultra-thin sheet glass using the float process, measuring just 0.1mm, roughly the thinness of a sheet of paper. Made from alkali-free glass, which is used as a glass substrate for TFT-LCDs, AGC's thin sheet float glass can be used in next-generation displays, lighting, touchscreens and high-tech applications such as medical devices.

Thin sheet glass is expected to be used in such products due to its flexible shaping and light weight, as well as basic characteristics of glass such as transparency, electrical insulation and resistance to heat, chemicals and gases.

World's first Bluetooth low-energy heart-rate belt

Dayton Industrial has developed Nordic μ Blue nRF8001 chip-based heart rate chest belt, which the company claims to be the world's first production-ready Bluetooth low-energy heart-rate belt, which will work with any Bluetooth version 4.0 smartphone or gadget.

The nRF8001 will enable the belt to run for up to 1.5 years from a CR2032 coin cell under typical usage conditions (one hour per day) while featuring an extremely slim (1.1cm thick) and compact (3.8x6.5cm²) plastic sensor housing, which supports a soft fabric-finished belt weighing just 46 gm (less than the weight of two AA batteries).

First complete MIPI mixed-signal physical layer test suite

Agilent Technologies has launched what it claims to be the industry's first complete MIPI mixed-signal physical layer (M-PHY) test suite for mobile computing customers.

The Agilent solution suite will help design engineers turn on, debug and validate all layers of their M-PHY devices, including physical and protocol layers, at speeds up to 5.8 Gbps.

M-PHY technology supports a broad range of applications, including interfaces for monitors, cameras, audio and video equipment, memory, power management, and communication between baseband and RFIC components.

The Agilent solution consists of oscilloscopes, protocol analysers and exercisers, and bit error-rate testers (BERTs) using custom M-PHY stimulus software. Each instrument comes with custom M-PHY-ready software to support design teams through the entire product design process.

World's smallest GPS antenna module

Fastrax has unveiled the Fastrax UC430, a 9.6x14.0x1.95mm³-sized antenna for handheld computers, digital cameras, mobile phones, asset tracking devices, and other applications with space and power restrictions.

The Fastrax UC430 maintains awareness of its location at
