

all times, contributing to fast and convenient use of location-aware digital devices. By utilising SiRFware technology including the Adaptive Micropower Controller, the module autonomously activates itself periodically from stand-by, resulting in the reduction of time-to-first-fix (TTFF) by up to 70 per cent. With its ability to continually maintain better-than-hot-start conditions without having to be kept fully turned on all the time,

The Fastrax UC430 GPS antenna module packs many features into a miniature form factor

the SiRFstarIV architecture enables the UC430 to eliminate annoying start-up delays without draining precious battery power.

In addition to the integrated chip antenna, the Fastrax UC430 supports optional connectivity for external antenna signal. The option allows using the integrated antenna as a backup, enabling the module to stay operational even if the external antenna is removed or damaged. The module supports both active and passive antennas.

World's first content addressable memory

NEC Corporation and Tohoku University have developed the world's first content addressable memory (CAM) that maintains the same high operation speed and non-volatile operation as existing circuits, when processing and storing data on a circuit while the power is off.

CAM is a part of spintronics logic integrated circuit technologies that utilise the negative properties of electrons together with the spin magnetic moment. The new CAM utilises the vertical magnetisation of vertical domain wall elements in reaction to magnetic substances, in order to enable data that is processing within the CAM to be stored on a circuit without using power. This contrasts with conventional technologies that required data to be stored within memory. As a result, data can be saved on circuits even when power is cut from the CAM.

Use of the new CAM in combination with existing non-volatile memory is related to greater non-volatility of CPU for electronics and other storage devices. Furthermore, it enables the development of electronics that start instantly and consume zero electricity while in standby mode.

CAUTION NOTICE

Notice is hereby given to all concerned including the Manufacturers, Merchants and Traders dealing inter alia with "LED Aviation Obstruction Lighting Device". Our client, Kumar Krishna Rohatgi of Binay Opto Electronics Private Ltd. is the Patentee of Indian Patent No. 188995 of 9th May 1996 relating to "LED Aviation Obstruction Lighting Device". Therefore, it would not be lawful for any person without the written consent, of our client, to indulge in any act of MAKING, PURCHASING, USING (AS END-USER/CUSTOMER), OFFERING FOR SALE, SELLING OR IMPORTING such device in India during the subsistence of this patent.

It is further made known to all concerned that any unlawful act by any person would not be acceptable to our client, who may decide to take legal action against the infringers for such wrongful act in a Court of Law.

All concerned in the Trade and Commerce and hereby requested to contact the undernoted address or any further details regarding the above and to avoid unnecessary litigation and/or legal proceedings.

Kolkata-700 017

Retrofit PowerLED Tube Light

The BINAY PowerLED Retrofit tubelight fits directly into a standard fluorescent tube luminaire or strip

- Wattage less than 50% of fluorescent system, with similar light output
- Operates from 100VAC to 260VAC (No flickering at lower voltages)
- Provides sharper visual clarity than fluorescent tube
- Life of 12 to 15 years, with a warranty of 5 years
