

GET MORE VALUE WITH THE STM32 VALUE LINE MICROCONTROLLER

STM32 Value line block diagram

Abbreviations:

AWU: Auto wakeup from halt
BOR: Brown-out reset
PC: Interintegrated circuit

PDR:
POR:
PVD:

Power-down reset
Power-on reset
Programmable voltage detector

RTC:
SPI:
USART:

Real-time clock
Serial peripheral interface
Universal synchronous receiver transmitter

STMicroelectronics

The most accessible STM32 with optimized features for a greater choice in price-sensitive designs

- Cortex™-M3 providing 1.25 DMIPS/MHz
- Up to 11 PWM 16-bit timers supporting motor control
- Static memory controller with parallel LCD interface
- Advanced analog with 12-bit ADC and DAC
- CEC hardware function
- 16-Kbyte to 512-Kbyte embedded Flash
- 48-pin to 144-pin packages
- All devices pin-to-pin and software compatible
