

All About Embedded Linux

Today, many handheld gadgets with embedded computers like mobile phones and tablets port embedded Linux. The main advantage is that Linux is integrated with a large number of Open Source applications. To learn more about embedded Linux, you may refer to some websites listed below

Linux For Devices

Linux For Devices assists companies and developers in efficiently getting started on this important topic, and also helps those who are already using embedded Linux, with up-to-date information both on technology and market. It was started in 1999 by Rick Lehtbaum, who maintains another interesting blog DeviceGuru.com. Coverage by LinuxDevices.com includes news, articles, polls and discussion forums—all primarily focused on using Linux in a wide range of embedded devices and applications.

uClinux

uClinux, pronounced as “you-see-linux,” was a derivative of Linux 2.0 kernel intended for micro-controllers without memory management units. It was originally created by D. Jeff Dionne and Kenneth Albanowski in 1998 for Motorola DragonBall integrated microprocessor. Whether you are an engineer, student, hobbyist or Linux enthusiast, this website provides all you need to know about uClinux—tutorials, FAQs, hardware projects, developer forum, etc.

Embedded Linux Interfacing

Embedded Linux Interfacing is a website launched by Dr Craig Hollabaugh—the author of the book ‘Embedded Linux: Hardware, Software & Interfacing.’ Dr Hollabaugh is a full-time embedded Linux consultant and shares a great deal of experience through the website. He has included ewiki plugin for easier page creation/editing and website page linking. There are news articles posted on the website along with a trail of information about using embedded Linux for product development.

Embedded Craft

Embedded Craft is useful for all those who are working in the embedded system domain or want to start a career in this field. It has a complete section on embedded Linux and provides a comprehensive tutorial (news, articles, case studies, etc) for development on this platform. The website covers various fields of embedded technologies.

Kannan's blogspot

Kannan's blogspot provides a tutorial on embedded Linux for ARM processor development, many other write-ups, posts and tutorials related to Linux and Open Source software development for embedded systems. Also, Kannan King is the blog for latest technology, laptops, computers, monitors, cameras and gadgets with reviews.
