

New Products

COMPONENTS

Audio chip

STMicroelectronics has launched a digital audio system-on-chip (SoC) under its Sound Terminal family.

The STA350BW supports up to 50 watts of output power without requiring any external heat-sink. It has digital audio processing on the chip and features multiband dynamic

range compression, integrated protection and run-time automatic diagnostic circuitry.

The IC's power stage uses ST's FFX technology to stream full digital audio to the speakers by providing four selectable run-time output configurations supporting a choice of operating modes including 2.0-, 2.1- or 1.0-channel, or 2.0-channel with a pulse-width modulation output for an external subwoofer.

Repeaters

National Semiconductor has introduced a new family of PCI Express (PCIe) Gen-3 (8Gbps) repeaters for data centre servers and storage systems.

Powered by the company's third-generation SiGe BiCMOS process, the DS80PCI102, DS80PCI402 and DS80PCI800 provide receive-equali-

sation gain up to 36 dB and transmit de-emphasis of 12 dB. The repeaters enable up to 101.6 cm (40 inches) of FR-4 backplane reach to simplify migration from Gen-2 to Gen-3 data rates

The DS80PCI800 includes eight channels, while the DS80PCI402 and DS80PCI102 feature four bidirectional lanes and one bidirectional lane, respectively.

Microcontroller for portable sensors

ON Semiconductor has introduced a mixed-signal microcontroller for precision measurement and monitoring.

Designed for use in portable sensing applications and built with the ARM Cortex-M3 processor, the Q32M210 features dual 16-bit analogue-to-digital converters (ADCs), triple 10-bit digital-to-analogue converters (DACs) and a 32-bit core.

Housed in a 140-pin TLLGA package, the microcontroller features on-

chip power supervision with dedicated brown-out protection circuitry and low-battery detection for predictable operation under all battery conditions.

Power devices for automotive lighting

Renesas Electronics Corporation has introduced intelligent power devices (IPDs) for automotive lighting applications.

The μ PD166011, μ PD166013 and μ PD166014 for turn signals and brake light applications integrate power MOSFETs as switching elements and control circuits for protection and self-diagnostic functions into a single package.

The μ PD166011 and μ PD166013 have a 12-pin power HSSOP package and two output channels with an on-state resistance of 25 milliohms and 60 milliohms, respectively. The μ PD166014 comes in a 24-pin power HSSOP package with four output channels and an on-state resistance of 60 milliohms.

Oscillators

Belgium-based European Crystal Organization (ECO) has introduced three new oscillators with new logic HCSL that targets PCI Express applications.

EK (PECL output), LK (LVDS output) and HK (HCSL output)
