

BINAY- Lighting Up The Future

Binay LED Aviation Obstruction Lights

BINAY LED based HIGH INTENSITY

Aviation Obstruction Light Beacon

(As per the International Civil Aviation Organisation (ICAO) requirements for use on structures above 45m)

Available in Low Intensity and Medium Intensity versions (As per the International Civil Aviation Organisation guidelines), BINAY's patented LED Aviation Lights come with a 5-year warranty

LED Obstruction Lighting for:

- Industrial chimneys and smokestacks
- Transmission, microwave, and cellular towers
- Radio, TV and similar structural towers
- High-rise buildings and structures
- Airports and airfields

The BINAY LED Aviation Obstruction Light offers the following advantages:

- Fit-and-forget maintenance-free operation
- A long life of 100,000 hours (50 years at 12 hours daily burning)
- Runs for itself within a short period of operation in the form of reduced installation, maintenance and servicing costs
- Quick installation; Reliable quality 365 days per year
- Shock-proof and vibration-resistant
- Over-Engineered internally to allow for natural LED internally degradation over its operating lifetime

THE BINAY LED OBSTRUCTION LIGHT IS UNDER ACCEPTED PATENT, AND AS SUCH IS A PROPRIETARY PRODUCT

the capacity to capture more than 90 per cent of available light compared to traditional photovoltaics which only use visible light or about 20 per cent of the sun's rays that reach the earth.

The researchers aim to extend this concept to a direct solar-facing antenna device capable of collecting solar irradiation in the near infrared and optical regions of the solar spectrum.

World-leading ePaper resolution

E Ink Holdings and Seiko Epson Corporation are set to jointly develop a 300dpi electronic paper device with razor-sharp text and images for ePaper document readers.

The new device is claimed to enable the world's highest-resolution ePaper tablets. Developed specifically to meet the high data demands of business and academia, its IC controller and processing power enable the display to handle large files while maintaining the display control and operability found in today's electronic paper displays, including fast page navigation and a sophisticated user-interface.

Innovative measurement arm

FARO Technologies has introduced what it claims to be the most advanced, state-of-the-art FaroArm ever produced – the FARO Edge.

The portable measurement arm allows manufacturers to easily verify their product quality by performing inspections, tool certifications, CAD-to-part analysis and reverse engineering.

Edge features the first ever integrated personal measurement assistant. With its built-in touchscreen and on-board operating system, it revolutionises portable metrology by providing standalone basic measurement capability. It does not need a laptop to perform quick and simple dimensional checks, or to optimise system performance with its onboard diagnostic routines.

It offers connectivity to Bluetooth, Wi-Fi, USB and Eth-
