

SAGA-220: India's fastest supercomputer

ernet and has a smart sensor technology to warn against excessive external loads, correct thermal variations and detect possible set-up problems.

SAGA-220: India's fastest supercomputer

The Indian Space Research Organisation has built a supercomputer called 'SAGA-220,' which is India's fastest with a theoretical peak performance of 220 trillion operations per second. The computer was fully designed and built at Vikram Sarabhai Space Centre, Thiruvananthapuram, using commercially available hardware, Open Source software components and in-house developments at a cost of about Rs 140 million. The system, which consumes a power of only 150 kW, is being used by space scientists for solving complex aerospace problems.

Smallest location-placing solution

STMicroelectronics has announced a complete hardware solution for advanced sensing applications with ten degrees of freedom. A set of three thin, high-performance MEMS sensors provides accurate and comprehensive information on linear, angular and magnetic motion together with altitude readings, enabling enhanced navigation and smarter user-interface in mobile phones and other portable consumer devices.

An emerging new class of mobile consumer applications, such as location-based services, require rather complex sensing capabilities. By using just three sensors—a geo-magnetic module, a gyroscope and a pressure sensor—a consumer device can have a complete indication of its linear acceleration, angular velocity, earth gravity, heading and altitude. With this information, mobile users will be able to identify their direction and precise location in all three dimensions wherever they go, including places with no or low GPS signal, such as inside buildings in urban canyons or in mountainous and forested terrain.

CAUTION NOTICE

Notice is hereby given to all concerned including the Manufacturers, Merchants and Traders dealing inter alia with "LED Aviation Obstruction Lighting Device" Our client, Kumar Krishna Rohatgi of Binay Opto Electronics Private Ltd. is the Patentee of Indian Patent No. 188995 of 9th May 1996 relating to "LED Aviation Obstruction Lighting Device". Therefore, it would not be lawful for any person without the written consent, of our client, to indulge in any act of MAKING, PURCHASING, USING (AS END-USER/CUSTOMER), OFFERING FOR SALE, SELLING OR IMPORTING such device in India during the subsistence of this patent.

It is further made known to all concerned that any unlawful act by any person would not be acceptable to our client, who may decide to take legal action against the infringers for such wrongful act in a Court of Law.

All concerned in the Trade and Commerce and hereby requested to contact the undernoted address or any further details regarding the above and to avoid unnecessary litigation and/or legal proceedings.

BINAY LED-based Lights

PowerLED Street Light

PowerLED Light Bay Light
PowerLED Strip Light

BINAY-Lighting Up The Future

- Extremely low power consumption
- Long life (in excess of 50,000 hours)
- Models with light output to match conventional street lights
- No maintenance required: very low Lifetime Ownership Cost
