

Safety has relied on Infineon Flash for years – What about Security?

SOLID FLASH™

Combining the advantages of flash with Infineon's unique high security expertise!

Infineon designs its new generation of security products with 90nm SOLID FLASH™ technology.

Leveraging its proven, longstanding expertise in automotive applications that requires extremely high reliability for safety and comprehensive history from selling more than three billion chip card devices using EEPROM/Flash-based non-volatile memory, Infineon offers its customers a variety of SOLID FLASH™ products with both high flexibility and ROM-like security.

With SOLID FLASH™, Infineon is the worldwide first supplier of security products combining the advantages of highly flexible and reliable Flash with outstanding and secure contactless performance, targeting applications like payment, government ID, high-end mobile communications, and transport.

Security Concept of SOLID FLASH™

Infineon incorporates dedicated security features to enable a secure and reliable product usage in SOLID FLASH™ products which has already been officially acknowledged by EMVCo and Common Criteria EAL 5+ (high) certifications.

Architectural Security

- Memory encryption
- Memory management
- Fault detection

Functional Security

- Secure mask transfer
- Secure download
- Locking mechanism
