

Online User Groups and Communities

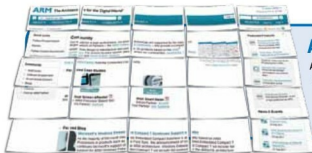

Sometimes knowledge-centric online groups and communities teach you more than the books and classrooms, as discussions in the groups are actual first-hand experiences of engineers using the same technology on a variety of platforms. There are a multitude of resources on the Web, but it's hard to find the right one. Here are some active forums from the companies themselves.

TI E2E Community

In 2008, Texas Instruments launched its E2E Community—a place for engineers from all over the world to discuss and find support for their electronic design projects. At e2e.ti.com, you can ask questions, share knowledge, explore ideas and help solve problems with fellow engineers. The website provides you access to the library of technical content and blogs from TI experts, facilitates connections with like-minded engineers and recognises the involvement of active members.

ARM Connected Community

ARM Connected Community is claimed to be the industry's largest network of partners who support innovations based on ARM in high-performance, low-power technology. The community is divided into sub-segments like multimedia, software enablement and smart mobile devices. This is the place to catch up on the latest blogs, news, interviews, technical guides and idea sharing. You can also get the list of contests and events hosted by ARM.

LabVIEW Zone Community

LabVIEW Zone is an extension of NI Developer Zone, exclusively designed for LabVIEW users across the world. Through this community, you can share code and application solutions, network with other users, and access a wide range of NI and user-developed resources to improve your LabVIEW skills. It works as a single, definitive resource for all the related information. LabVIEW Zone includes sections for networking, learning and more. Users can visit the learning center to prepare for LabVIEW development certification or to take an online LabVIEW tutorial.

Freescale Forums

These forums, monitored by Freescale Support, provide answers to the developer community and take their feedback. The information available on the community is visible to all, but only the registered members are able to post questions or responses. If you've posted a question to a forum, you can choose the reply that best answers your question and mark it as an accepted solution, distinguished by a new icon. You can also bookmark discussions and pages and subscribe to RSS feeds.
