Forehead thermometer

Getting a temperature doesn't have to be an ordeal. With the V977 Vicks forehead thermometer with fever insight feature, it's as simple as a touch

to the head. The thermometer is claimed to provide clinically-proven accurate reading within three seconds.

It comes in a non-invasive design which is suitable for your baby. The best part of this thermometer is its inbuilt memory tracker which can recall last twelve temperature readings.

The thermometer (V977) is priced at Rs 1799.

SECURITY

Conventional fire-alarm panel

Matrix Comsec has introduced a conventional fire-alarm panel that can continuously monitor smoke, heat and flame in the immediate vicinity of a home, apartment, office, industrial plant and other buildings.

PROPAC is claimed to identify the smallest

spark accurately and provide a real-time response to reduce the risk of loss of life and material. It is available for two, four and eight alarm zones with two and four notification circuits. With a bunch of latest safety features, it satisfies key requirements like fire and fault detection with reporting,

evacuation for fire drill, fire control through fire relay and integration with access control system. LCD display, touch-sense keypad and computer connectivity allow users to configure the system easily in minimal time.

PROCESS CONTROL

Wireless process signal communication

Tinsley has come up with a range of wireless process signal communication products that are safe, economical, user-friendly and easy to install. These products use radio frequency technology for transmission of process signals in the permissible bandwidth of 868 MHz.

The products consist of a wireless transmitter and receiver (modem), and are suitable for transmission of temperature, RH and other process signals like 4-20 mA from pressure sensors, etc. The global system requires only one modem (receiver) in the control room which supports up to 255 transmitters. The modem can support a distance of 300 m, which can be extended to 2700 m using repeaters.

TOOLS & EQUIPMENT

Industrial robotic arm trainer

Technido has come up with a 5-axis industrial robotic arm trainer for educational institutions and training centres. The machine is a great learning tool for both electronics and mechani-

cal engineering students, as well as industrial trainee engineers. It comes with an advanced control equipment governed by an 8-bit RISC microcontroller. It can also be interfaced by

an external microcontroller ranging from 8-bit to 32-bit ARM controller as well as PLC. It also follows users' instructions from the PC, running a very simple-to-use software through USB port.

The arm trainer is good for study of stepper motors, DC motors, servo motors and feedback control systems. It weighs around 8 kg and has an operating voltage of 12V.

POWER SUPPLY

Pure sine-wave UPS

Kevin Power Solutions has come up with an IGBT-based Cyber UPS that provides pure sine-wave output. The

UPS is compact, light-weight and compatible with generators. It provides a 15 per cent extra power back-up, wide charging window (110V AC to 280V AC), and 20 to 25 per cent saving in electricity. Battery consumption is nil in 'switch off' and 'mains off' conditions.
