

BINAY- Lighting Up The Future

Binay LED Aviation Obstruction Lights

BINAY LED-based MEDIUM INTENSITY Aviation Obstruction Light Beacon

As per the International Civil Aviation Organisation (ICAO) requirements for use on structures above 45m

Available in Low Intensity and Medium Intensity versions (as per the International Civil Aviation Organization guidelines), BINAY's patented LED Aviation Lights come with a 5-year warranty

LED Obstruction Lighting for:

- Industrial chimneys and smokestacks
- Transmission, microwave, and cellular towers
- Radio, TV and similar structural towers
- High-rise buildings and structures
- Airports and airfields

The BINAY LED Aviation Obstruction Light offers the following advantages:

- Fit-and-forget maintenance-free operation
- A long life of 100,000 hours (20 years at 12 hours daily burning)
- Pays for itself within a short period of operation in the form of reduced installation, maintenance and servicing costs
- Quick installation; Reliable operation 365 days per year
- Shock-proof and vibration-resistant
- Over-Designed Intensity to allow for natural LED intensity degradation over its operating lifetime

THE BINAY LED OBSTRUCTION LIGHT IS UNDER ACCEPTED
PATENT, AND AS SUCH IS A PROPRIETARY PRODUCT

view Video Coding (MVC) is to 3D films. MVC is used to pack together the two images needed for the stereoscopic 3D effect to measurably reduce the film's bitrate, and this technique can be used to reduce the size of 3D films by as much as 40 per cent. That means you can quickly receive excellent quality 3D films in connection with the 3G-LTE mobile radio standard.

Diagnostic radiology application for mobile devices

A new mobile radiology application cleared by the U.S. Food and Drug Administration will allow physicians to view medical images on the Apple iPhone or iPad and make diagnoses.

Radiology images taken in the hospital or physician's office are compressed for secure network transfer, then sent to the appropriate portable wireless device via a software called Mobile MIM. Mobile MIM allows the physician to measure distance on the image and image intensity values and display measurement lines, annotations and regions of interest.

The display performance of mobile devices can experience significant variations in luminance levels even between mobile devices of the same model. The Mobile MIM application includes sufficient labeling and safety features to mitigate the risk of poor image display due to improper screen luminance or lighting conditions.

Mobile MIM on Apple iPhone

1TB hard drive for iPad

Sanho Corporation has announced a one-of-its-kind hard drive that can connect directly to the iPad via the Apple camera connection kit.

The HyperDrive for iPad allows users to directly use their iPads to browse and transfer up to 1 TB of video and photo content without the use of computers, additional apps or a jailbroken iPad. Finished in a slim enclosure, the HyperDrive looks like any portable USB hard drive except that it has two mini USB ports—one for connecting to the computer to function as a normal USB hard drive and the other to connect to the iPad via the Apple camera connection kit. Using the Apple camera connection kit, the iPad is able to connect to SD cards and self-powered USB devices.

There is a size limitation of 32 GB, making it impossible for larger USB hard drives to connect to the iPad. HyperDrive overcomes this limit with its ability to turn individual file folders into virtual 32GB drives on the fly that are read-
