

able by the iPad. While the HyperDrive is bus-powered when connected to the computer, it has an internal 1600mAh battery to power its connection to the iPad.

World's smallest HSPA+ voice and data platform for Androids

Icera Inc., a soft modem company, has come out with the latest in its Espresso platform series, targeted at HSPA+ smartphones. The Espresso 450, which comprises Icera's latest baseband and RF technology, is claimed to deliver quad-band HSPA+ up to 28 Mbps together with full quad-band 2G/3G voice support functions in the industry's smallest footprint of 700 mm².

The Espresso 450 platform is said to be the first to combine high-speed cellular data technology with a complete radio interface layer for the Android operating system and full validated voice technology. As a result, phone manufacturers can build products combining the world's most powerful communications modem with their choice of the highest-performance application processors, to offer truly unique user experiences in the thinnest, lightest form factors scaleable from 2G to 3G to 4G.

Laptop with colour-shifting lid

Toshiba has introduced a laptop featuring a colour-changing lid that shimmers when it shifts in the light. The effect is achieved without using any paint at all, through several polyester laminate films—each comprising thousands of nano-technology layers.

The Dynabook Qosmio T750 also sports a 2.66GHz Intel Core i5-480M, 4 GB of DDR 3 memory and a 39.6cm display that is LED-backlit.

New accelerated processors

AMD has developed a new class of accelerated processors that offers not only higher computing speed but also better graphics quality. The Fusion processors include a graphics card (GPU) and microprocessor (CPU) on a single chip, thereby allowing computer makers to develop new form factors for devices. These will also include power-saving features that will enable an all-day battery life.

The Fusion family of accelerated processing units (APUs) utilises a single-die design that combines multi-core CPU (x86) technology with a powerful DirectX 11-capable graphics and parallel processing engine. The APUs also include a dedicated high-definition video acceleration block and a high-speed bus that transmits data across differing types of processor cores within the same design.

AMD Fusion family of APUs

CAUTION NOTICE

Notice is hereby given to all concerned including the Manufacturers, Merchants and Traders dealing inter alia with "LED Aviation Obstruction Lighting Device" Our client, Kumar Krishna Rohatgi of Binay Opto Electronics Private Ltd. is the Patentee of Indian Patent No. 188995 of 9th May 1996 relating to "LED Aviation Obstruction Lighting Device". Therefore, it would not be lawful for any person without the written consent, of our client, to indulge in any act of MAKING, PURCHASING, USING (AS END-USER/CUSTOMER), OFFERING FOR SALE, SELLING OR IMPORTING such device in India during the subsistence of this patent.

It is further made known to all concerned that any unlawful act by any person would not be acceptable to our client, who may decide to take legal action against the infringers for such wrongful act in a Court of Law.

All concerned in the Trade and Commerce and hereby requested to contact the undernoted address or any further details regarding the above and to avoid unnecessary litigation and/or legal proceedings.

Retrofit PowerLED Tube Light

The BINAY PowerLED Retrofit tubelight fits directly into a standard fluorescent tube luminaire or strip

- Wattage less than 50% of fluorescent system, with similar light output
- Operates from 100VAC to 260VAC (No flickering at lower voltages)
- Provides sharper visual clarity than fluorescent tube
- Life of 12 to 15 years, with a warranty of 5 years
