

ATMEL AVR PROGRAMMING AND DEVELOPMENT TOOLS

Including Bascom AVR, AVR Studio 5, CodeVisionAVR 2.0, Topview Device Programmer B and PonyProg

■ ANJALI SETHIYA

The low-power, high-performance AVR microcontrollers from Atmel can handle demanding 8- and 16-bit applications. Their well-defined input/output structure limits the need for external components and reduces development cost.

This month's EFY-CD includes some interesting programming and development tools for your AVR microcontroller based projects.

Bascom AVR

Though Bascom AVR compiler is made for Atmel's AVR series microcontrollers, it can be used with many other microcontrollers too as it can export a hex or bin file.

What's Special?

Bascom AVR supports USB, ISP, serial and Stk500 programmers, and can program ATtiny, ATmega, AT90s and AT90 family microcontrollers. You can erase the microcontroller and set fuse bits and locks using Bascom AVR. You can also simulate the program step by step for debugging.

Distributor: The demo version of the software can be downloaded freely from the website.

Home page: www.mcselec.com

Download URL: www.mcselec.com/index.php?option=com_docman&task=cat-view&gid=99&Itemid=54

Platforms Supported: MS Windows OS

AVR Studio 5

AVR Studio 5 is a new integrated development environment (IDE) from Atmel that supports all 8-bit and 32-bit AVR microcontrollers.

What's Special?

AVR Studio 5 can program and debug your project with the included simulator, or use the powerful on-chip debugging. It gives you a seamless and easy-to-use environment to write, build and debug your C/C++ and assembler code.

Distributor: The beta version of the software can be downloaded from the website after registering your details.

Download URL: www.atmel.com/dyn/products/tools_card.asp?tool_id=17212&source=avr_5_studio_overview

Platforms Supported: MS Windows OS

CodeVisionAVR 2.0

CodeVisionAVR is a C cross-compiler, IDE and automatic program generator for the Atmel AVR family of microcontrollers. The built-in AVR chip in-system programmer (ISP) software enables automatic transfer of the program to the microcontroller chip after successful compilation/assembly.

What's Special?

The ISP software is designed to work in conjunction with the Atmel STK500, STK600, AVRISP, AVRISP MKII, AVR Dragon, AVRProg (AVR910 application note), Kanda Systems STK200+, STK300, Dontronics DT006, Vogel Elektronik VTEC-ISP, Futurlec JRAVR, and MicroTronics' ATCPU and Mega2000 development boards.

Distributor: The software can be purchased online from www.hpinfotech.ro/my_html/purchase.htm.

Evaluation version is also available for download.

Home page: www.hpinfotech.ro

Download URL: www.hpinfotech.ro/html/download.htm

Platforms Supported: 32- and 64-bit MS Windows (2000, XP, Vista and Windows 7)

Topview Device Programmer B

Topview programmer B supports many 8051 derivative microcontrollers and AVR devices manufactured by Atmel.

What's Special?

The programmer supports popular and widely available microcontrollers with OTP and flash memories. It also supports both binary and hex file formats and program fuse bits.

Distributor: This software can be downloaded freely from the website.

Platforms Supported: MS Windows OS

PonyProg

PonyProg is a serial device programmer software with a user-friendly GUI framework. It aims to read from and write to almost every serial device.

What's Special?

PonyProg supports PC bus, Microwire, SPI EEPROM, Atmel AVR and Microchip PIC micro, and can be used as a low-cost starter kit for PIC and AVR microcontrollers. It can read/write Intel hex format files as well as raw binary files, and features security bits editing for AVR, AT89S and PIC.

Distributor: This software can be downloaded freely from the website.
