TEST & MEASUREMENT

Oscilloscopes

LeCroy Corporation has launched the WaveRunner 6 Zi oscilloscopes in the 400MHz to 4GHz class. These oscilloscopes offer deep memory, 40GS/s sample rate, full line of probing solutions and serial data analysis tools. The toolset allows engineers to validate a design, debug errors at the board and characterise an embedded system.

The industrial design incorporates a 30.7cm (12.1-inch), 16:9 high-definition display that can be rotated and/or tilted for optimal viewing.

Logic analyser

Agilent Technologies has introduced what it claims to be the industry's fastest logic analyser. The U4154A combines a state capture speed of 4 Gbps on 68 channels and 2.5 Gbps on 136 channels with the ability to capture data on eye openings as small as 100 ps by 100 mV.

Timing zoom provides simultaneous state and timing measurements with 80ps timing resolution and 256

k-sample memory depth. The trigger sequencer speed of 2.5 Gbps gives engineers the ability to trigger reliably on sequential events on double data rate (DDR) memory and other high-speed signals without having to give up triggering flexibility.

In addition, the eye-scan capability allows a quick overview of signal integrity on all the signals of a DDR system.

Online TOC analyser

Anatel has launched the TOC600 low-cost, online total organic carbon (TOC) analyser that analyses with complete sample oxidation and can measure both online and offline. Typically, of-

fline measurements (laboratory methods) are used for high concentrations (>1 ppm) and online measurements for sub-ppm (<1000 ppb) detection and quicker response than the lab methods.

The analyser does not require any reagent or chemical.

Source meter

Keithley has added a high-power System SourceMeter instrument to its Series 2600A.

Optimised for high-power semiconductor test, Model 2651A offers a flexible, four-quadrant voltage and current source/load coupled with

precision voltage and current meters. It can source or sink up to 2000 watts of pulsed power or 200 watts of DC power. It can also precisely measure signals as low as 1 pA and 100 μ V at a speed of up to one microsecond per reading.

Model 2651A provides a choice of digitising or integrating measurement modes for precise characterisation of both transient and steady-state behaviour.

Stress monitor

Zeebeetronics has developed a biofeedback stress monitor (CSR Z901) that monitors stress by translating minute tension-related changes in skin into sound. By concentrating on the tone, the user can learn to lower the pitch and thereby the stress and anxiety level.

The compact, handheld device is effective in the treatment of anxiety, hypertension, incontinence and headaches.
