

MB/s. These are compliant with the SD Card Association specification and compatible with microSDHC host devices including Android smartphones, BlackBerry devices, HD cameras and tablet PCs.

The cards support FAT32 file format and come with a lifetime warranty.

Solidstate drive

Seagate Technology has added two new members to its Pulsar solidstate drive (SSD) family—Pulsar.2 and Pulsar XT.2.

Pulsar.2 is an MLC-enabled SSD of up to 800 GB. It automatically detects and corrects a multitude of data errors that can occur during normal drive operations, to deliver high levels of enterprise-class data integrity and endurance. Pulsar.2 supports both native 6Gbps SAS and 6Gbps SATA interfaces.

Pulsar XT.2 is a 6.3cm (2.5-inch), SLC-based, native 6Gbps SAS enterprise SSD of up to 400 GB. It is capable of sustainable random reads at 48k and writes at 22k input/output operations per second, and sequential reads at 360MB/s and writes at 300MB/s. Pulsar XT.2 is optimised for complex, mixed workloads typical of enterprise environments.

COMPONENTS

3G smartphone chipset

MediaTek India has announced the MT6573 platform—a highly-integrated

chipset supporting high-speed packet access (HSPA) advanced 3G technology. The chipset runs on the latest version of the Android operating system and can support a full range of connectivity solutions for Bluetooth, WiFi, FM radio and GPS functions.

The integrated 3D graphics capability of the chipset brings gaming and user-interface capabilities that were previously available only to high-end smartphones. The processor used is ARM11, which supports 30fps video playback, up to 8-megapixel camera and a touchscreen phone.

8-bit microcontrollers

Microchip Technology Inc. has expanded its 8-bit segmented LCD microcontroller (MCU) portfolio with the PIC16LF190X family.

The new family including PIC16LF1902/3/4/6/7 MCUs features eXtreme Low Power (XLP) technology for sleep currents down to 20 nA, a typical active current of 35 μ A per MHz, extended battery life and capa-

bilities such as utilising the integrated temperature indicator to provide crystal-accuracy compensation, low-power RTC support and low-voltage-detect support utilising the internal analogue-to-digital converter (ADC) and voltage reference.

These MCUs provide an optimised feature set, including up to 14kB Flash program memory, up to 512 bytes of RAM, up to fourteen 10-bit ADC channels, serial communication and the capability to drive up to 116 LCD segments.

MISCELLANEOUS

Coder

MathWorks has floated the MATLAB Coder which enables design engineers to automatically generate readable, portable C and C++ code directly from their MATLAB algorithms, eliminating the need for prototyping, implementation and software integration.

MATLAB Coder supports an extensive set of MATLAB language features for algorithm development, including built-in matrix math operators and dynamic array handling. Hundreds of operators, functions and system objects are supported, including many advanced algorithms for digital signal processing and communications.

Child safety solution

Techmech Controls has come up with the KidSafe solution that uses active RFID and GPS to help parents know the whereabouts of their kids. Children need to wear weather-proof smart badges, which get tracked by smart readers.

The system is completely automated with no intervention from either the children, school authorities or parents. It constantly tracks the school bus, all the children, exact location of the bus in the city, speeding information and constantly updates a Web-based server in real time.
