

Novatium simplifies personal computer with Navigator 5.0

Novatium has launched the Navigator 5.0 operating environment that offers an advanced user interface and significant new features that allow you to get the most out of your PC. The user can personalise his desktop with a number of widgets such as mails, TV, messenger, 'to do' task list, calendar, games and news for easy content access. 'PC as a service' removes the complexities of virus protection, software updates, application installation and maintenance by running all software in the backend. These features are moved away from the user to the cloud. The services, including client hardware, are remotely managed end to end by experts.

Tata DOCOMO launches SongShare

Tata DOCOMO has launched the SongShare application that allows subscribers to post and upload their 'call me tunes' on Facebook profile and share with their social networking buddies. Tata DOCOMO subscribers can also activate these tunes by clicking the Social RBT wall posts. The application also recommends options for songs based on past usage and location.

Ubuntu transforms your PC experience

Canonical has announced the release of the Ubuntu operating system for public download. Ubuntu 11.04 introduces Unity—Ubuntu's new interface which is simpler, easier to use and more beautiful than previous editions of Ubuntu. Ubuntu 11.04 provides a visually rich interface for the PC that is inspired by smartphone and tablet design thinking. For older PCs, Ubuntu automatically determines whether their graphics card supports Unity and provides a 'classic' experience when Unity would not work. Users can also choose the classic desktop experience for familiarity or consistency or where there are large desktop deployments and not all can move to Unity immediately.

WIRELESS ENTERTAINMENT TABLETS

CREATIVE'S ZiiO TABLETS SYNCHRONISE EASILY WITH WIRELESS SPEAKERS AND HEADPHONES TO DELIVER PURE WIRELESS ENTERTAINMENT

Creative technology has launched ZiiO tablets in 17.8cm (7-inch) and 25.4cm (10-inch) models. Both the models run on Android 2.2 operating system and promise pure Android audio performance with X-Fi Audio enhancements and support for different audio-video formats. These synchronise easily with other audio products such as Creative's wireless speakers and headphones to form the pure wireless entertainment ecosystem.

The tablets have a 16.8-million (in 17.8cm version) and 262,000 colour (in 25.4cm version) display for laser-sharp images. These support Bluetooth 2.1 EDR and Wi-Fi connectivity and have a front facing camera, built-in mic and speaker (stereo), accelerometer, and
