

power failure. So if you want to run a computer load, select a UPS.

It's better to go for a home UPS because even if you don't have a computer at home, you may buy one tomorrow. If you are budget-conscious, you need not worry too much about the added cost. An inverter with UPS will cost you more or less the same as a standalone inverter.

Price and types

The 600VA and 800VA inverters (without batteries) start from as low as Rs 2500 and Rs 4000, respectively. Battery usually costs one-and-a-half times the inverter.

Two types of inverters are available: High-frequency and low-frequency.

High-frequency inverters use a smaller transformer and hence are more efficient and much lighter. Low-frequency inverters use a big transformer. These are generally lower in efficiency and higher on reliability.

Inverters can also be classified based on their output waveforms. Inverters convert AC into DC and then DC into AC, which can be created as square wave, modified sine wave or pure sine wave based on the filtering process.

All squarewave inverters today are more or less modified sinewave type. Modified (quasi) sinewave inverters are somewhere in between squarewave and pure sinewave.

For sensitive loads like home

BI850SINE Home UPS (850VA)

Features

- Wide input voltage window
- UPS-inverter switch lets you use your home UPS to power computer systems as well as lights, fans and televisions
- Battery input fuse for protection against reversed polarity of battery cables when connecting your home UPS and battery
- Charger output selector allows you to match the home UPS battery charger output to your specific battery size
- Generator compatibility; recharge your battery while on generator power
- Home or away switch keeps your battery charged when you're away for extended periods without needless discharges
- Battery charging indicator lets you know when your battery is charging and when it is fully charged
- Audible alarms provide notification of changing flywheel conditions
- Sinewave output
- Microprocessor-controlled, 3-stage regulated charging
- Resettable circuit breaker allows easy recovery from overloads
- Audible alarms provide notification of changing utility power and UPS conditions
- LED status indicators
