

NAVIGATIONAL CALENDAR WITH CURRENT DATE INDICATOR

■ SRIDHAR BUKYA

A calendar is used to count days, weeks, months and years to any date, and keep track of events, birthdays and holidays so that you can plan well in advance. Conventional paper calendars are limited to current year. If

something changes, you have to go through the inconvenience of erasing and updating the entries in the paper calendar. A paper calendar can also be damaged or lost easily. The important events along with all the entries in the calendar might get physically destroyed in a few years.

Online calendars, which can be

accessed through devices like PCs and tablets, are a convenient and much safer option but these lack some features. They show all the date entries in the same colour and do not have navigation feature for viewing the previous/next months/years. If you want to see previous/next month/year, the system time needs to be changed first before logging in again to the page. The same has to be refreshed to update the changes in the calendar, which is quite cumbersome.

Presented here is a colourful calendar that shows weekdays, weekends, events and holidays in different colours. You don't need to change the system time to navigate to the previous/next month/year dates. These can be changed by using '+' and '-' symbols on the control panel or by directly jumping to the current calendar using a single button.

This program displays the calendar in an informative multicolour way using the elements of JavaScript Style to display current date, month and year parameters along with navigation features. This calendar is programmed to display holidays, events and birthdays as per the user's choice by changing these details in the code. The calendar also shows the Sundays in a different colour for easy differentiation.

Program

The program 'Navi_Cal.htm' is coded in JavaScript and takes the advantage of predefined 'Date()' function which

Month Today Year						
Su	Mo	Tu	We	Th	Fr	Sa
Date	Date	Date	Date	Date	Date	Date
Date	Date	Date	Date	Date	Date	Date
Date	Date	Date	Date	Date	Date	Date
Date	Date	Date	Date	Date	Date	Date
Date	Date	Date	Date	Date	Date	Date
Date	Date	Date	Date	Date	Date	Date
Date	Date	Date	Date	Date	Date	Date
Legends	Live	Inactive	Active	Sunday	Holiday	Event
