

Non-Destructive Test And Evaluation Of Materials: Second Edition

In this second edition, the contents have been reviewed and rearranged to include additional topics of interest. For instance, ethics and morality has been introduced in the first chapter. Non-destructive test and evaluation (NDE) methods are widely used in mining industry. This topic has been included as a continuation of the industrial application of NDE.

A separate chapter on NDE of fibre-reinforced composites has been added, which provides specific test methods and brings out a range of defects encountered during fabrication, service and repair. Effect of various defects on mechanical properties has been discussed and effectiveness of test methods highlighted.

Computer Modelling Of Electrical Power Systems: Second Edition

This book describes the use of component models and efficient computational techniques in the development of computer programs representing the steady and dynamic states of electrical power systems. Handy for practising engineers as well as final-year bachelor's degree and master's level courses in advanced power systems, the book requires some basic knowledge of power system theory, matrix analysis and numerical techniques. The introductory chapter describes main computational and transmission system developments followed by two chapters describing the modelling of power transmission systems. Further chapters include load-flow, power system in dynamic state, electromagnetic transients, etc.

CMOS Mixed-Signal Circuit Design: Volume II

This volume is a continuation of the 'CMOS—Circuit Design, Layout and Simulation,' which had 29 chapters. It starts from chapter 30 and discusses mixed-signal circuit design.

The material is assisted with online learning aids through companion website <http://cmosedu.com>. The website provides worked solutions to the problems, SPICE simulation netlist examples and discussions on mixed-signal circuit design.

There are a total of six chapters, which integrate theory and examples with simulation results using actual numbers, not just symbolic representations.
