

Master Electronics Through Self Learning Kits

If you want to go beyond theory and become a pro at electronics—here are a few self-learning kits that you should try your hands on. These kits are also a great resource for training institutes and engineering colleges.

Arduino self-learning kit

Arduino is the latest buzz in the world of electronics. Everyone is talking about it. It's not only known for its open standards but also for the simplicity involved in mastering it, and the innovative applications that engineers are building around it.

Here's an excellent self-learning kit that includes an Arduino Uno, a USB cable, a mini breadboard, jumper wires, 20 LEDs, 17 segment red LED, 12 volt 1 amp power adapter, 1 sound sensor, 1 touch sensor, 4 mini push button switches, and a book of components.

Self-learning material includes CD containing tutorials and sample programs.

₹290

AVR self-learning kit

If you want to master the AVR micro-controller, then this is the kit for you. The development board comes with in-built interfacing with a 192 alphanumeric LCD, a stepper motor, a sensor (TDS-CP Sensor) and a serial cable.

Self-learning material includes (i) Program CD (Software, application notes, software, and sample programs), (ii) Study material in the form of a booklet.

Plus, you get access to free online training (video) and can get more assignments and evaluation done if your projects via online.

₹290

8051 Self learning kit

8051 is taught in all engineering colleges. However if you want to master this chip and try your hands-on projects, this is the kit for you. It's an excellent resource for those who want to master 8051 micro-controller. The development board comes with in-built interfacing with a 192 alphanumeric LCD, a stepper motor, a sensor (TDS-CP Sensor) and a serial cable. Self-learning material includes (i) Program CD (Software, application notes, software, and sample programs), (ii) Study material in the form of a booklet.

Plus, you get access to free online training (video) and can get more assignments and evaluation done if your projects via online.

₹2750

40 Do It Yourself Projects

For those who want to gain hands-on experience in building electronics projects, this is a great kit to start with. The kit comes with a book titled '40 Do It Yourself Projects', which provides you with 40 different DIY projects to work on.

Some of the interesting projects include auto-ramp, cordless FM mixer, rechargeable white LED torch, 7 segment display clock, phone broadcaster, etc. Besides the book, the kit comes with a range of components (ICs) and a breadboard for trying out the DIY projects. Key components include: IC 805, touch sensor, light sensor (TDS-CP), IC 4060, LM386, IC4011, IC4017, Sensor 78H1, IC40106.
