

Bourns, Inc. – Electronic Components

RS 485 Evaluation Board

Bourns® RS 485 Evaluation Board serves as an aid in evaluating circuit protection on RS-485 serial device ports, using TBU® High-Speed Protectors (HSPs), GDTs, TVS diodes and Metal Oxide Varistors (MOVs) to meet the required industry standards on RS 485 port interfaces. The recommended Bourns® TBU® HSP solution with a low capacitance GDT offers enhanced high-speed performance features over competing technologies, which can help the design engineer increase the surge and transient protection level on RS-485 ports and place the entire circuit protection solution into a smaller reduced PCB area.

TBU® High-Speed Protectors

FEATURES

- Overcurrent & overvoltage protection
- Reacts fast to nano-seconds
- Virtually no intrinsic capacitance or inductance
- Blocks very high surges exceeding any other solutions
- Exceptionally low let-through energy resulting in improvement of system stability

Gas Discharge Tubes

FEATURES

- 75-1100 V operating voltages
- 8/20 μ s surge current ratings of 2 kA-40 kA
- Low capacitance
- Through-hole and SMT packages available
- Switch Grade Fail-Short options
- Fast GDT versions available
- Low overshoot hybrid designs
