

“The key to success is a robust and reliable design that can withstand steep fluctuations and high voltages up to 440 volts and phase-to-phase input in rural areas—Sanjeev Garg, executive director, PEP Infotech

and commodity items, especially power semiconductor devices and copper for transformers used in inverters and lead for batteries. Almost all the components are readily available in India. Only critical components like MOSFETs, microcontrollers and triacs are imported for the inverters made in India.

Focus areas

Energy-efficiency. Focus is shifting towards energy-efficiency. Imposing star ratings' compulsion over inverters and UPS will not only help the consumers choose the right product but quality manufacturers will also get their dues in a standardised yet competitive market.

Thankfully, inverters and UPS will soon be covered under the standards and labelling (S&L) programme of the Bureau of Energy Efficiency (BEE). The S&L programme will empower manufacturers to self-certify the products by adopting approval testing procedures.

Renewable energy systems. Renewable energy systems help to generate and save the power. Integration of these technologies with upcoming innovations will target new potential markets with more energy efficiency.

Rural markets. "About 75-80 per cent of the rural market in India is untouched. There is a huge opportunity for economical and user-friendly inverters in rural area," informs N.K. Mishra, chairman and managing director, Ekta Tel-communication & Systems.

Battery disposal. Inverter batteries have disposal issues. Safe disposal of used batteries is necessary as these contain toxic elements that can harm the environment. This problem can be solved by improving the technology to recycle the batteries. The used batteries should end up only with the authorised recyclers.

"As per the newly proposed guidelines for battery disposal, the entire responsibility rests with the sellers. Instead of putting all the responsibility of battery disposal on the manufacturer's network, it should be a collective responsibility of society as a whole. There should be some compulsions on the buyers' side as well. Otherwise, it would either be harsh for manufacturers or unimplementable," feels Dua.

There is a need to create awareness amongst dealers, distributors, channel partners and customers about safe disposal of used batteries as per battery management and handling rules of the government.

With improvements in the inverter design, however, the life of batteries is increasing, which is decreasing the menace

EKTAETEL SERIES DSP SINE WAVE HOME UPS-INVERTER

With Active Battery Monitor, Error Correction,
SSS and Line Noise Filter
As Economical as @ Rs. 7.5/VA

India's Only
DIGITAL HOME
UPS - INVERTER
with
IEC standard
compatible

Silent Features

- Capable To Take Full Load
- Protection against High Voltage as high as 440 V or even more
- Protect the connected gadget/appliance in event of short circuit
- Protection Against Battery Reverse Polarity (Optional)
- Protection against heavy load as 600%
- Solar Operation Also (Optional)
- Pure Sine Wave Output- Smooth Operation

Wanted Distributor And Dealer
For All States Of India And Asia

EKTA ENERGY SYSTEMS PVT LIMITED (A Unit of Ekta Group of Industries)

NS-40, First Phase, Adityapur Industrial Area, Jamshedpur- 832109

Ph-0657-2372230/6546854, Email-ekta_rk@rediffmail.com, contact@ektagroup.co.in

www.ektagroup.co.in

of battery disposal bulk slowly. Also, increasing use of LED lights will increase the battery life substantially.

Way to go

The government can encourage R&D and innovation by way of reducing taxes on R&D and innovative products, particularly green energy products. In particular, it should:

1. Reduce the value-added tax on inverters in all states to 4 per cent from 13.5 per cent as this product is not a luxury item and it improves the infrastructure substantially.
2. Set up some more test labs in northern India to promote R&D for rugged design.
3. Give further incentives to promote usage of solar inverters with LED lighting output as these are eco-friendly.

Su-Kam has implemented an open platform to foster the culture of innovation. A motivation with new ways of collaborative creation and exchange of ideas generates new methods and ideas for making the product more efficient and unique.

The government, on its part, can play a seminal role in innovation by investment in R&D. Laying the right business conditions for innovations generated in India will make the investment done in R&D economically feasible as profits are generated. ●
