

“The mobile phone market has space for serious manufacturers”

Shenzhen Sang Fei Consumer Communications Co., Ltd, which now owns Philips' mobile phone business globally, recently announced the launch of Philips Xenium dual-SIM mobile phones in India. On the occasion, Dr Tan Jok Tin, CEO and managing director, spoke to Uma Gupta, an executive editor at EFY, about mobile phones today and tomorrow, Philips' comeback and its intelligent power management technology. Excerpts:

■ **DR TAN JOK TIN**
CEO AND MANAGING DIRECTOR
SHENZHEN SANG FEI CONSUMER COMMUNICATIONS CO.

With computing and TV too loaded on mobile phones, these seem to be enjoying a premium position vis a vis other devices...

It's hard to comment on this. A mobile phone is a more personal device. TV is a home device. So maybe your home TV isn't purchased by you, while the mobile phone is selected by you. PC users will like to use the PC for business, sometime for entertainment or for Web browsing, but not everyone will use it for voice communication. Similarly, most people will not run office or professional apps or watch movies on a mobile phone.

Actually, the perspective is we are moving to a three-screen (mobile, PC and TV) era. You need to have your own

personal screen, you need to have a screen for your work and then a screen that you can share with your family. A lot of these functionalities can be performed by mobile phones. The only thing is whether you are comfortable with a small screen size.

Touch has redefined user experience. Going forward, which emerging technologies will play the biggest role in mobile phones evolution in the next five years?

Open Source mobile technology is catching the attention of many in recent times. The base of Android phones is steadily on the rise. Some other technologies worth mentioning include Wi-Fi, mobile computing,
