

Introducing STM32 F4 Series

World's Highest Performance Cortex™ -M Microcontrollers

FPU

- Single precision
- Ease of use
- Better code efficiency
- Faster time to market
- Eliminate scaling and saturation
- Easier support for meta-language tools

MCU

- Ease of use of C programming
- Interrupt handling
- Ultra-low power

DSP

- Harvard architecture
- Single-cycle MAC
- Barrel shifter

Applications

- Points of sale/inventory management
- Industrial automation and solar panels
- Transportation
- Medical
- Building
- Security/fire/HVAC
- Test and measurement
- Consumer
- Communication

Abbreviations: • DSP: digital signal processor • FPU: floating point unit • MCU: microcontroller unit

STMicroelectronics

STM32 F4 Series, over 30 part #s

L1, F1, F2, F4 series: seamless migration amongst 250 pin-to-pin compatible part #s

- **Real-time performance**
Cortex-M4 with F_{CPU} 168 Mhz/210 DMIPS 363 Coremark Score
- **Outstanding power efficiency**
<1µA V_{DD} RTC, Ultra low dynamic consumption, 1,7 to 3,6 V V_{DD}
- **Superior and innovative peripherals**
Faster peripherals, 2 full duplex I²S, RTC with sub second accuracy, Camera interface, Crypto/Hash HW processor, Ethernet MAC10/100 with IEEE 1588 v2 support, two USB OTG (one with HS support)
- **Maximum integration**
1 Mbyte Flash, 192-Kbyte SRAM...
- **Extensive tools and software**
CMSIS DSP library, Matlab support, various IDE starter kits, RTOS and stacks

**STM32 F4
Discovery Kits**
