

The global cloud computing market was projected to grow at 33 per cent compounded annual growth rate and reach \$680 billion by 2020.

"There are ample opportunities for cloud in every industry, and with the increased preference of cloud adoption in the coming years, the industry will have to invest in competency building internally to take advantage of cloud computing technologies," said Som Mittal, president, Nasscom.

Research imperative to make end products locally

"Manufacturers in the country and educational institutions should focus on research so that the country can strengthen its capabilities in making end products," said V. Veerappan, chairman of Greenwich Nexgen Energy Solution, in Coimbatore recently. He was in the city to inaugurate Elektrotec — a four-day industrial electrical and electronic exhibition organised by Coimbatore District Small Industries' Association.

Mr Veerappan said businesses should look at increasing their market base, and adopt a good business model.

Electronic product consumption in India is now worth about \$60 billion, almost 80 per cent of which is imported — either as products or components. Korea, Malaysia, Vietnam and China, on the other hand, have significantly developed their manufacturing sector during the last few years.

Haryana to have nine solar power plants

The Haryana government is planning to set up nine power plants in the state. The state's chief minister Bhopinder Singh Hooda recently inaugurated the first plant set up in Nandha village. The plant will generate 1MW power per hour. The move comes in continuation with the central government's plan to generate 20,000MW power through solar power plants. The government plans to accomplish the target by 2022.
