Reddy receives the ASME Leadership Award 2011

B.V.R. Mohan Reddy, chairman and managing director, Infotech Enterprises, has bagged American Society of Mechanical Engineers' (ASME) Leadership Award 2011. He is the first Indian and the seventh recipient of this award.

Reddy has been acknowledged for his pioneering efforts in providing leading-edge engineering services in industries such as aerospace, transportation, telecommunications, energy and hi-tech. He has also played a pivotal role in establishing the 'Engineered in India' proposition, which has helped build a world-class knowledge-based industry leveraging quality Indian talent.

Infronics gets MSME national award

Infronics Group has received Special Recognition MSME National Award 2010 for outstanding performance in the MSME sector. The award was received by M.S. Raju, CMD and president, Infronics Group, at a ceremony in Vigyan Bhavan, New Delhi.

(NOFN) project which has been undertaken by the government to spread broadband connectivity across India.

Kapil Sibal, minister for communications and information technology, said, "NOFN will not be used by private operators to promote their services. However, they can use the network for the benefit of the society."

IEEE introduces advanced metering standards in India

IEEE Standards Association (IEEE-SA) has introduced two new standards—IEEE 1701 and IEEE 1702—to create a multi-source plug-and-play communications environment for implementation of diverse smart metering devices, for the first time in India.

While deployment of smart meters and advanced metering infrastructure has been recognised as an important step towards smart grid implementation and enhancing power efficiency in India, the issue of interoperability has significantly impacted the pace and quantity of smart meter roll-out. With the introduction of the two standards, IEEE-SA aims to help address this basic issue.

The IEEE 1701 and IEEE 1702 standards provide lower-layer communication protocols for LAN/WAN ports and telephone ports, respectively,

used in conjunction with utility metering. These solve the problems associated with single-source systems and with multi-source systems based upon proprietary communication protocols.

SEMI forms special interest group for LEDs

SEMI India has announced the formation of a special interest group for high-brightness light-emitting diodes (HB-LEDs) and solid-state lighting (SSL). The group will focus on materials, equipment and manufacturing issues to further promote the industry—through cost reduction, quality improvement, supply chain development and industry promotion. It comprises both SEMI members and industry leaders in the HB-LED market.

"With the new LED/SSL special interest group in India, we will gain additional recognised expertise and leadership to help nurture the fledgling LED industry in India. We look forward to the group's industry insights and strategic guidance, as we navigate the SSL industry in India and drive for its growth and profitability," commented Debasish Paul Choudhury, president, SEMI India.

Ricoh India ties up with Redington (India)

Ricoh India has chosen Redington (India) as the value-added channel

partner for its production printing products.

"Within a short span, we have garnered over 33 per cent market share in this segment (production printing) in India. Our tie-up with Redington has been very strategic as today Ricoh foresees exponential growth in this segment. The synergy between Ricoh and Redington will pave new ways in various new segments including commercial printing, photo labs, advertising agencies and pre-press houses for the production printing business," said Tetsuya Takano, managing director and chief executive officer, Ricoh India.

Dixon Technologies partners with Lighting Science Group

Dixon Technologies and Lighting Science Group have entered into a manufacturing/distribution partnership to launch a full range of LED lighting solutions in India. The two companies recently demonstrated one of their first joint products—a sub-Rs 675, 60-watt equivalent omnidirectional A19 LED bulb that will be available in India later this year and sold worldwide by Lighting Science Group early next year.

"With India's peak load electricity deficit expected to increase upwards of 15 per cent in the near term, the adoption of energy-efficient technologies will prove critical in meeting its infrastructure needs and demands of continued economic growth. Our partnership with Lighting Science Group will make LED technology available for large-scale implementation in the Indian market and we expect to be the market's leading seller of LED lighting within two years," said Sunil Vachani, chairman and managing director, Dixon Technologies.

Matrix IP-PBX now interoperable with Cetus IP-phones

As part of its strategic focus on telephony solutions for the hospitality segment, Matrix Comsec has
