

announced interoperability of Cetusmake Teledex and TeleMatrix IP-Phones with its range of hospitality IP-PBX. With this segment-specific interoperability initiative, Matrix aims to offer more user-terminal alternatives to hoteliers and strengthen its presence in the hotel telephony solution market.

"Cetus has good market reach and is known for hotel-specific IP-phones. To strengthen Matrix's presence in hospitality domain, the bundled solution of Matrix IP-PBX with Cetus IP-phones will offer a comprehensive solution with extended IP end-terminal alternatives for guest rooms," said Ruchir Talati, product manager-enterprise division for Matrix.

Avnet Technology launches CloudReady programme

Avnet Technology has introduced the CloudReady programme that will prepare and enable channel partners to capitalise on emerging cloud computing growth opportunities in India. CloudReady offers partners tools and resources to enter the cloud computing market, implement cloud-based solutions and grow business.

"Although cloud computing is still a relatively recent phenomenon in India, we wanted to build our capabilities and resources early on to serve this rapidly evolving market. The Avnet CloudReady team will educate our channel partners on market dynamics, enhance their cloud computing capabilities and help them create strategies to capture opportunities," said Naresh Desai, general manager, Avnet Technology Solutions, India.

Chrontel standardises on Magma to accelerate analogue/mixed-signal IC development

Chrontel has standardised on Magma Design Automation's Titan mixed-signal design platform, FineSim SPICE and FineSim Pro circuit simulation, and Quartz DRC and Quartz LVS physical verification products.

Reliance partners with Siemens

Reliance Security Solutions and Siemens will jointly develop homeland security solutions for safe, secure and smart cities and highways in India. With contiguous, pan-India broadband wireless access spectrum, Reliance plans to offer 4G wireless networking services for safety, security and other advanced applications. Reliance and Siemens will combine to leverage the 4G network for low latency and assured quality of service required for video and security applications.

Morningstar's solar controller gets IEC certification

Morningstar's TriStar maximum power-point tracking solar controller has received IEC62093 certification. The product is now standardised for large off-grid photovoltaic systems including remote telecommunications, security and monitoring, railroad signalisation, as well as schools, medical clinics and homes. It has been included in numerous off-grid projects throughout India.

Synopsys acquires nSys Design Systems

Synopsys Inc. has completed the acquisition of nSys Design Systems, an independent provider of verification IP (VIP). With this acquisition, Synopsys is increasing its investment in VIP technology to address the growing verification challenges designers face as they create more and more complex systems-on-chips to serve the demand for 'smart' electronics.

Samsung plans to make India an export hub

South Korean mobile handset maker Samsung is planning to make India an export hub to supply mobile phones to the Middle East and African countries, increasing the exports from India to ten per cent of its manufacturing volume from the current one to three per cent. Ranjit Yadav, country head (mobile and IT business), Samsung India, said Samsung looked upon India as one of its top three markets, US and China being in the lead. It has pumped in about \$70 million for expansion of its plant in India.

IDEAL Industries opens office in Gurgaon

IDEAL Industries Inc., as part of its global growth strategy, has opened a 100 per cent subsidiary in India as IDEAL Industries India Private Limited in Gurgaon. The company believes that the businesses which are best placed to be developed in the Indian market initially include networks and electrical businesses.

FAI Electronics hits shipping record

FAI Electronics India has attained a regional sales milestone, shipping its three-millionth unit. FAI Electronics is a division of electronic components supplier Future Electronics. "This success demonstrates the market acceptance of a new business model for a new customer base," said Sunny Arora, managing director, Future Electronics India.

"To keep up with the changing demands of the consumer market, our customers need a constant supply of innovative visual interface IC solutions. Magma's comprehensive, highly integrated analogue/mixed-signal design platform and simulation and verification solutions streamline our entire analogue/mixed-signal design flow and allow us to deliver the high-quality, differentiated silicon our customers

need - on time," said Dr David Soo, president and CEO, Chrontel.

"With the tight integration of Titan, FineSim and Quartz, analogue designers can leverage faster throughput, higher capacity and more automation to develop innovative analogue/mixed-signal ICs faster and more cost effectively," said Anirudh Devgan, general manager, Magma's Custom Design Business Unit.
