

ATTENTION

LED Light Manufacturer

Our Product Range Consist of the following

- TRIO Dotted Lens, Lens for street light, 1 watt lens.
- Heat Sink for TRIO
- Channel Patti for Epoxy.
- Panel Light Housing.
- Street light Housing - 12 watt to 150 watt
- Tube Light Housing - T-5T-8, T-10.
- Wall Washer Housing - Ultra Thin, Heavy duty.
- Housing for LED PLL Light & Casing for T-5 Tube Light.
- Flood Light Housing : 30w, 50w, 60w, 90w.
- Led Drivers : 1w-30watt, SMPS for LED Strips.

CAIICOM TELELINK PVT. LTD.

Shop No.: 4-A, Plot No. 201, Road No. 13,
Jawahar Nagar, Goregaon
(W) Mumbai - 62 (INDIA)
Telefax : +91-22-26760152
Cell : 9820976362/9820973320
Email : Caiicomteleshop@yahoo.com

EFY: You can purchase the programmer from our associates Kits'n'Spares. You may contact them on 011-26371661 or info@kitsnspares.com to get the programmer or visit www.kitsnspares.com website to get more details on the product. Most programmers or burners come with detailed instructions on how to burn the code into the microcontroller.

Inverter and UPS

EFY has the best electronics website, but inverter and UPS circuits are missing. Please include inverter or UPS circuit diagrams having following features:

1. Overload protection
2. Battery under-voltage protection
3. Battery over-charge protection

These should have automatic battery chargers and switch mode power supplies instead of transformers. I have seen that China makes inverters using PIC or something like microcontrollers. Please publish a low-cost inverter or UPS based on PIC microcontroller, which is easy to design and program in C language.

Ali Ahmed
Pakistan

EFY: We will try to publish microcontroller-based inverter or UPS circuits in future.

Programmable Door Lock

I am a student and want to construct 'password-based door locking system using AT89C2051' as my final year project. Let me know if you have this project with you. I want the project details including the circuit diagram, components list and working principle.

Shreyasi Hazra
Kolkata

EFY: We have 'Microcontroller-Based Code Lock' project published in August 2006. It is a four-digit code door-locking system based on AT89C2051 microcontroller. You can also call it a 'programmable door lock system' or 'password-based door locking system

using AT89C2051'

The complete kit of this project is available with Kits'n'Spares.

Short-term Course on Microcontroller

I'm a Malaysian Tamil, looking for short-term courses on microcontrollers for one or two weeks during my visit to Tamil Nadu. Can anyone provide me some related information?

Krisbrook Samy
Facebook

Girish Pundlik replies: One or two weeks courses will only help you to get started. It's difficult to grasp such knowledge barely in few days, especially if you are new to the subject. You must work with the knowledge acquired in short-term course and try to gain more practical knowledge.

In my opinion, 8051 is the easiest microcontroller to start with because there are tons of resources available, it's cheap and covers many ideas applicable for other microcontrollers as well.

Learning about a single microcontroller will not be enough. You should know at least two or three different microcontrollers if you want to be a designer. Buy a couple of development boards and keep working on new projects you find online. There are tons of resources available online. I will be glad to help you in any problems you might face.

EFY's Workshop in Chennai

EFY Tech Center is conducting workshops in Delhi, Bangalore and Hyderabad but why not in Chennai? Chennai is the base for electronics, robotics and microcontrollers in India!

EFY: Thanks for the feedback! We are looking for a suitable franchise in Chennai for setting up our training centre.
