

Take a Leap Forward in Green Development with High-Performance Ultra Low Power MCU

Renesas introduces the new low power RX200 series of mid-range RX family. Featuring high calculation performance of 1.56 DMIPS/MHz at ultra low 1.62 V operation, it satisfies the ever-increasing energy-saving demands of today and tomorrow.

High performance meets super low power — plus enhanced safety. The RX200 series is perfect for home appliances, portable battery-operated devices and other applications requiring high energy efficiency, performance, safety and functionality.

Advanced Features

■ Extremely wide operating range (1.62–5.5 V)

- 20 MHz operation at ultra-low 1.62 V
- 50 MHz high-speed operation at 2.7 V or more

■ High calculation performance

- Inherits the high calculation performance of the RX family
- 78 DMIPS at 50 MHz

■ Super low power consumption

- 17.3 μ A consumption current when operating at 50 MHz
- 1.68 μ A consumption current in software standby mode

■ Enhanced safety and peripheral functions

- Meets IEC 60730 Class B safety standard for home appliances
- Includes E2 Data Flash, ELC, POR, temperature sensor and more
