

NEW! The Most Efficient and Compact 1A Switching Regulator

Introducing the next generation of the acclaimed R-78 series

- ✓ Very high efficiency - up to 96%
- ✓ Ultra wide input range - 5 to 42VDC
- ✓ Low profile case - 11.6 x 10.4 x 8.5mm
- ✓ Maximum 1A output current
- ✓ Low standby current (1mA)
- ✓ Operating temperature -40°C to +85°C
- ✓ 3-year warranty
- ✓ SIP3 package compatible to TO-220 footprint

Increased input voltage range: 5 to 42VDC!

RECOM, the inventor of the R-78 switching regulator replacement for linear regulators, releases the next generation. The R-78C series. The existing features of the standard R-78 series (high efficiency, small case size & pin-compatibility with 78-series linear regulators) have been improved by adding a much higher input voltage range of up to 42VDC and double the output power in the same size case.

This means that the R-78C series can offer 15W of power in a case volume of only 1cm³. The ambient operating temperature covers the full industrial range of -40°C to +85°C, conversion efficiency is up to 96% making heat-sinking unnecessary and the output is fully protected against overloads and short-circuits.

Applications for the R-78C include industrial controls, battery-powered devices, hand-held equipment, avionics, fan controllers and embedded designs, but this versatile switching regulator module will find uses in every branch of electronics.
